Faculty of Science & Technology

Savitribai Phule Pune University,

Pune, Maharashtra, India

Curriculum For

Third Year of Information Technology

(2019 Course)

(With effect from AY 2021-22)

INDEX

Sr. No.	Name of the Course	Page No.
	SEMESTER-V	
1.	Program Educational Objectives	03
2.	Program Outcomes	04
3.	Program Specific Outcomes	05
4.	Theory of Computation	09
5.	Operating Systems	12
6.	Machine Learning	15
7.	Human Computer Interaction	18
8.	Elective –I	21-31
9.	Operating Systems Lab	32
10.	Human Computer Interaction Laboratory	36
11.	Laboratory Practice-I	39-52
12.	Seminar	53
13.	Mandatory Audit Course -5	56-60
	<u>SEMESTER –VI</u>	
14.	Computer Network and Security	64
15.	Data Science and Big Data Analytics	67
16.	Web Application Development	71
17.	Elective-II	75-84
18.	Internship	87
19.	Computer Network Security Lab	91
20.	DS & BDA Lab	93
21.	Laboratory Practice-II	96-106
22.	Mandatory Audit Course - 6	109-112

	Savitribai Phule Pune University, Pune						
	Bachelor of Information Technology						
	Program Educational Objectives						
PEO1	Possess strong fundamental concepts in mathematics, science, engineering and Technology to address technological challenges.						
PEO2	Possess knowledge and skills in the field of Computer Science and Information Technology for analyzing, designing and implementing complex engineering problems of any domain with innovative approaches.						
PEO3	Possess an attitude and aptitude for research, entrepreneurship and higher studies in the field of Computer Science and Information Technology.						
PEO4	Have commitment ethical practices, societal contributions through communities and life-long learning.						
PEO5	Possess better communication, presentation, time management and team work skills leading to responsible & competent professional sand will be able to address challenges in the field of IT at global level.						

Program Outcomes								
	Students are expected to know and be able to-							
PO1	Engineering knowledge	An ability to apply knowledge of mathematics, computing, science, engineering and technology.						
PO2	Problem analysis	An ability to define a problem and provide a systematic solutionwith the help of conducting experiments, analyzing the problem and interpreting the data.						
РОЗ	Design / Development ofSolutions	An ability to design, implement, and evaluate software or asoftware /hardware system ,component ,or process to meet desired need switch in realistic constraints.						
PO4	Conduct Investigation of Complex Problems	An ability to identify, formulate, and provide essay schematicsolutions to complex engineering /Technology problems.						
PO5	Modern Tool Usage	An ability to use the techniques, skills, and modern engineering technology tools, standard processes necessary for practice as a IT professional.						
PO6	The Engineer and Society	An ability to apply mathematical foundations, algorithmic principles, and computer science theory in the modeling and design of computer- based systems with necessary constraints and assumptions.						
PO7	Environment and Sustainability	An ability to analyze and provide solution for the local and global impact of information technology on individuals, organizations and society.						
PO8	Ethics	An ability to understand professional, ethical, legal, security and socialissues and responsibilities.						
PO9	Individual and Team Work	An ability to function effectively as an individual or as a team member to accomplish a desired goal(s).						
PO10	Communication Skills	An ability to engage in life-long learning and continuing professional development to cope up with fast changes in the technologies /tools with the help of electives, profession along animations and extra- curricular activities.						
P011	Project Management and Finance	An ability to communicate effectively in engineering community at large by means of effective presentations, report writing, paper publications, demonstrations.						
PO12	Life-long Learning	An ability to understand engineering, management, financial aspects, performance, optimizations and time complexity necessary for professional practice.						

	Program Specific Outcomes(PSO)						
	A graduate of the Information Technology Program will demonstrate-						
PSO1	An ability to apply the theoretical concepts and practical knowledge of Information Technology in analysis, design, development and management of information processing systems and applications in the interdisciplinary domain.						
PSO2	An ability to analyze a problem, and identify and define the computing infrastructure and operations requirements appropriate to its solution. IT graduates should be able to work on large-scale computing systems.						
PSO3	An understanding of professional, business and business processes, ethical, legal, security and social issues and responsibilities.						
PSO4	Practice communication and decision-making skills through the use of appropriate technology and be ready for professional responsibilities.

Savitribai Phule Pune University, Pune Third Year Information Technology (2019 Course)									
Teaching Scheme:	Credit Scheme:	Examination Scheme:							
Theory (TH): 3 hrs/week		Mid Semester : 30 Mar	ks						
	03 Credits	End_Semester : 70 Marl	ks						
Prerequisite Courses:									
1. Discrete Structures.									
2. Data structures.	2. Data structures.								
Companion Course, if any: NA									
Course Objectives:									
 To know the applicability of the To understand in detail the r automata. To learn the design of Finite Au of formal languages. To study the theory of computa 	model of computation to different elationship among formal languag utomata, Pushdown Automata and bility and complexity for algorithm	problems. ges, formal grammars and Turing Machine for processi design.	ng						
Course Outcomes:									
On completion of the course, stude	ents will be able to-								
CO1: Construct finite automata an	d its variants to solve computing pr	roblems.							
CO2: Write regular expressions for	the regular languages and finite au	itomata.							
CO3: Identify types of grammar, de	esign and simplify Context Free Gra	ammar.							
CO4: Construct Pushdown Automa	ata machine for the Context Free La	anguage.							
CO5: Design and analyze Turing ma	achines for formal languages.								
CO6: Understand decidable and un	decidable problems, analyze compl	lexity classes.							
	COURSE CONTENTS								
Unit I	FINITE AUTOMATA	(06 hrs)							
Basic Concepts: Symbols, Strings,	Language, Formal Language.								
Finite Automata (FA): Formal de and transition table for FA, Constr epsilon moves to NFA, Conversio Minimization of FA, Equivalence of Finite State Machine with outp Conversion.	finition and notations for FSM, Corruction of DFA, NFA, NFA with epsil n of NFA to DFA, and Conversion of FAs, and Applications of FA. Put: Moore and Mealy machines	oncept of state transition dia on moves. Conversion of NFA of NFA with epsilon moves to - Definition, Construction, I	igram A with DFA, Inter-						
Mapping of Course Outcomes CO1									
for Unit I									
Unit II	REGULAR EXPRESSIONS AND LANC	GUAGES (06 hrs)							
Regular Expressions (RE) : Definiti expressions, Equivalence of regular direct method, Conversion of FA	on and Identifies of RE, Operators r expressions and regular languages to RE using Arden's theorem,	of RE, Equivalence of two rest s (RL), Conversion of RE to FA Pumping lemma for RLs, C	egula usin losur						
properties of RLs, Applications of R	Regular Expressions.								

Mapping of Course Outcomes for	CO2							
Unit II								
Unit III	CONTEXT FREE GRAMMAR AND LANGUAGE	(06 hrs)						
Grammar: Introduction and repre	sentation, Chomsky Hierarchy, Formal defi	nition of Regular						
Grammar(RG), Conversions: LRG to I	RLG, RLG to LRG, RG to FA, FA to RG.							
Context Free Grammar (CFG): Definition of CFG, Derivation tree, sentential forms, Leftmost and								
Rightmost derivations, Ambiguous G	Rightmost derivations, Ambiguous Grammar and unambiguous grammar, Context Free Language							
(CFL).								
Grammar Simplification, Normal for	rms: Chomsky Normal Form, Greibach Normal	Form. Closure						
properties of CFL, Pumping lemma fo	or CFL.							
Mapping of Course Outcomes	СО3							
for Unit III								
Unit IV	PUSHDOWN AUTOMATA AND POST MACHINE	(06 hrs)						
Conversion of CFG to PDA and PDA to Post Machine (PM): Definition and co Mapping of Course Outcomes for Unit IV	or CFG. onstruction of Post Machine.							
Unit V	TURING MACHINE	(06 hrs)						
Turing Machina (TM) : Formal defin	ition of a Turing machine. Design of Turing m	achinos Variants o						
Turing Machines: Deterministic TM	Nondeterministic TM Multi-tane TM Univer	sal Turing Machine						
Halting problem of TM . Church-Tu	ring thesis. Recursive Languages and Recursive	elv Enumerable						
Languages, Post Correspondence Pro	blem.							
Mapping of Course	CO5							
Outcomes for Unit V								
Unit VI	COMPUTATIONAL COMPLEXITY	(06 hrs)						
Decidability: Decidable problems concerning regular languages, Decidable problems concerning								
context free languages, Un-decidability.								
Computational Complexity: Measuring Complexity, The Class P, Examples of problems in P, The Class								
NP, and Examples of problems in NP, Reducibility, Mapping Reducibility, Polynomial Time Reduction and								
NP Completeness. Satisfiability Prot	NP Completeness. Satisfiability Problem, NP Completeness of the SAT Problem,							
Normal Forms for Boolean Expressions, Cook's theorem, Node-C over Problem.

Savitribai Phule Pune University, Pune Third Year Information Technology (2019 Course) 314442: Operating Systems							
Teaching Scheme:	Credit Scheme:	Examination Scheme:					
Theory (TH) : 3 hrs/week	03 Credits	Mid_Semester: 30 Marks End_Semester: 70 Marks					
Prerequisite Courses:							
1. Computer Organization and Arc	hitecture						
2. Fundamentals of Data Structure	S						
Companion Course, if any: NA							
Course Objectives:							
1. To introduce basic concepts	s and functions of modern operating	systems.					
2. To understand the concept	or process, thread management and	a scheduling.					
4. To study various Memory M	Janagement techniques.						
5. To know the concept of I/O	and File management.						
6. To learn concept of system	software.						
Course Outcomes:							
On completion of the course, stud	ents will be able to-						
CO1: Explain the role of Modern Op	perating Systems.						
CO2: Apply the concepts of proces	ss and thread scheduling.						
CO3: Illustrate the concept of	process synchronization, mutual e	exclusion and the					
deadlock.							
CO4: Implement the concepts of v	various memory management techn	iques.					
CO5: Make use of concept of I/O r	nanagement and File system.						
CO6: Understand Importance of Sy	ystem software.						
	COURSE CONTENTS						
Unit I	OVERVIEW OF OPERATING SYST	TEM (06 hrs)					
Operating System Objectives and Functions , The Evolution of Operating Systems, Developments Leading to Modern Operating Systems, Virtual Machines, Introduction to Linux OS, BASH Shell scripting: Basic shell commands.							
Mapping of Course Outcomes							
for Unit I							
Unit II PROCESS MANAGEMENT (06 hrs)							
Process: Concept of a Process, Process States, Process Description, Process Control							
Threads: Processes and Threads, Concept of Multithreading, Types of Threads, Thread programming Using Pthreads.							
Scheduling: Types of Scheduling, Scheduling Algorithms, First Come First Served, Shortest Job First,							
Priority, Round Robin							

Manning of Course Outcomes	c03								
for Unit II									
		(06 hrs)							
Process (thread Superconstation and Mutual Evolution: Principles of Consurrancy, Paquiroments for									
Mutual Exclusion, Mutual Exclusion	and Mutual Exclusion. Frinciples of concurrences and	d Mutex)							
Classical synchronization proble	Classical synchronization problems: Readers (Writers Problem, Producer and Consumer problem)								
Inter-process communication (Pi	nes Shared Memory)	onsumer problem,							
Deadlock: Principles of Deadlock, Deadlock Modeling, and Strategies to deal with deadlock: Prevention									
Avoidance Detection and Recove	Avoidance Detection and Recovery Example: Dining Philocophers Problem / Panker's Algerithm								
Manning of Course Outcomes	Manning of Course Outcomes CO3								
for Unit III									
	MEMORY MANAGEMENT	(06 hrs)							
Memory Management: Memory	Management Requirements Memory Partitio	ning: Fixed Partitioning							
frames, Thrashing Mapping of Course Outcomes	CO4								
for Unit IV									
Unit V	INPUT/OUTPUT AND FILE MANAGEMENT	(06 hrs)							
File Management: Overview-File Directories, File Sharing, Record E	N, C-SCAN, LOOK, C-LOOK). s and File Systems, File structure. File Organiza Blocking, Secondary Storage Management.	tion and Access, File							
Mapping of Course Outcomes for Unit V	CO5								
Unit VI	SYSTEMS SOFTWARE AND ITS IMPORTANCE	(06 hrs)							
Need of System Software, study	of various components of system software.								
Assemblers: Elements of Assem	bly Language Programming, A simple Assembl	y Scheme and pass							
structure of Assemblers.									
Introduction to compilers: Phas	e structure of Compiler and entire compilation	process. Introduction to							
Macro processors, Macro Defin	ition and call, Macro Expansion Loaders and	Linkers. General Loader							
Scheme, Subroutine Linkages, Relocation and linking Linkages, Relocation and linking									
Mapping of Course Outcomes	CO6								
for Unit VI

Savitribai Phule Pune University, Pune								
Third Year Information Technology (2019 Course) 314443: Machine Learning								
Teaching Scheme:	Credit Scheme:	Exa	mination Scheme:					
Theory (TH) :3hrs/week	03 Credits	Semester : 30 Marks Semester :70 Marks						
Prerequisite Courses:								
1. Basics of Statistics 2. Linear Alge	ebra 3. Calculus 4. Probability							
Companion Course:								
1. Artificial Intelligence 2. Deep Lea	arning							
Course Objectives:								
1. To understand the basic concept	ots of machine learning and apply th	nem for th	e various problems.					
2. To learn various machine learn	ing types and use it for the various	machine le	earning tasks.					
3. To optimize the machine learni	ng model and generalize it.							
Course Outcomes:								
On completion of the course, stude	ents will be able to-							
CO1: Apply basic concepts of mad	chine learning and different types	of machi	ine learning algorithms.					
CO2: Differentiate various regression	on techniques and evaluate their p	erforman	ce.					
CO3: Compare different types of cla	assification models and their releva	nt applica	ation.					
CO4: Illustrate the tree-based and p	probabilistic machine learning algo	rithms.						
CO5: Identify different unsupervise	ed learning algorithms for the rela	ted real-w	orld problems.					
CO6: Apply fundamental concepts of	of ANN.							
	COURSE CONTENTS							
Unit I	INTRODUCTION TO MACHINE LEA	RNING	(06 hrs)					
Introduction: What is Machine Lea	rning, Definition, Real life application	ons, Learr	ning Tasks- Descriptive and					
Predictive Tasks, Types of Learn	ning: Supervised Learning Unsup	ervised L	earning, Semi-Supervised					
Learning, Reinforcement Learning.								
Features: Types of Data (Qualitative and Quantitative), Scales of Measurement (Nominal, Ordinal, Interval,								
Ratio), Concept of Feature, Feature construction, Feature Selection and Transformation, Curse of								
Dimensionality.								
Dataset Preparation : Training Vs. Testing Dataset, Dataset Validation Techniques – Hold-out, k-fold Cross validation, Leave-One-Out Cross-Validation (LOOCV).								
Mapping of Course Outcomes CO1								
tor Unit I								
Unit II	CLASSIFICATION		(06 hrs)					

Binary Classification: Linear Classification model, Performance Evaluation- Confusion Matrix, Accuracy, Precision, Recall, ROC Curves, F-Measure

Multi-class Classification: Model, Performance Evaluation Metrics – Per-class Precision and Per-Class Recall, weighted average precision and recall -with example, Handling more than two classes, Multiclass Classification techniques -One vs One, One vs Rest

Linear Models: Introduction, Linear Support Vector Machines (SVM) – Introduction, Soft Margin SVM, Introduction to various SVM Kernel to handle non-linear data – RBF, Gaussian, Polynomial, Sigmoid.

Logistic Regression – Model, Cost Function.

CO2	
REGRESSION	(06 hrs)
	CO2 REGRESSION

Regression: Introduction, Univariate Regression – Least-Square Method, Model Representation, Cost Functions: MSE, MAE, R-Square, Performance Evaluation, Optimization of Simple Linear Regression with Gradient Descent - Example. Estimating the values of the regression coefficients

Multivariate Regression: Model Representation

Introduction to Polynomial Regression: Generalization- Overfitting Vs. Underfitting, Bias Vs. Variance.

Outcomes for Unit III TREE BASED AND PROBABILISTIC MODELS (06 hrs)		CO3	ping of Course	Mapping of Co
Unit IV TREE BASED AND PROBABILISTIC MODELS (06 hrs)			comes for Unit III	Outcomes for I
	ırs)	TREE BASE	Unit IV	Ui

Tree Based Model: Decision Tree – Concepts and Terminologies, Impurity Measures -Gini Index, Information gain, Entropy, Tree Pruning -ID3/C4.5, Advantages and Limitations

Probabilistic Models: Conditional Probability and Bayes Theorem, Naïve Bayes Classifier, Bayesian network for Learning and Inferencing.

Mapping of Course	CO4	
Outcomes for Unit IV		
Unit V	DISTANCE AND RULE BASED MODELS	(06 hrs)

Distance Based Models: Distance Metrics (Euclidean, Manhattan, Hamming, Minkowski Distance Metric), Neighbors and Examples, K-Nearest Neighbour for Classification and Regression, Clustering as Learning task: K-means clustering Algorithm-with example, k-medoid algorithm-with example, Hierarchical Clustering, Divisive Dendrogram for hierarchical clustering, Performance Measures

Association Rule Mining: Introduction, Rule learning for subgroup discovery, Apriori Algorithm, Performance Measures – Support, Confidence, Lift.

Mapping of Course Outcomes for Unit V	C05	
Unit VI	INTRODUCTION TO ARTIFICIAL NEURAL NETWORK	(6 hrs)

Perceptron Learning- Biological	Neuron, Introduction to ANN, McCulloch Pitts Neuron, Perceptron and its			
Learning Algorithm, Sigmoid Neu	ron, Activation Functions: Tanh, ReLu			
Multi-layer Perceptron Model –	Introduction, Learning parameters: Weight and Bias, Loss function: Mean

9. Machine Learning – Offered b	by Stanford Online - <u>https://www.coursera.org/learn/machine-learning</u>			

Savitribai Phule Pune University, Pune					
Third Yea	Third Year Information Technology (2019 Course)				
3144	44: Human Computer Interac	tion			
Teaching Scheme:	Credit Scheme:	Examination Scheme:			
Theory (TH):3 hrs/week	Theory (TH) : 3 hrs/week O3 Credits Mid_Semester : 30 Marks End_Semester : 70 Marks				
Prerequisite Courses:					
1. Problem Solving and Object Ori	ented Technologies				
Course Objectives:					
1. To introduce to the field of hu	man-computer-interaction study.				
2. To gain an understanding of th	he human part of human-computer-i	interactions.			
3. To learn to do design and evalu	uate effective human-computer-inte	eractions.			
4. To study HCI models and theo	ries.				
5. To understand HCl design prod	cesses.				
6. To apply HCl to real life use ca	ses.				
Course Outcomes:	and the states				
On completion of the course, students will be able to-					
CO1 : Explain importance of HCI study and principles of user-centered design (UCD) approach.					
CO2: Develop understanding of human factors in HCl design.					
CO3: Develop understanding of models, paradigms, and context of interactions.					
CO4: Design effective user-interfac	ces following a structured and organ	ized UCD process.			
CO5: Evaluate usability of a user-ir	nterface design.				
CO6: Apply cognitive models for pr	edicting human-computer-interaction	ons.			
	COURSE CONTENTS				
Unit I	INTRODUCTION	(06 hrs)			
What is HCI?, Disciplines involved in HCI, Why HCI study is important? The psychology of everyday things					
Donald A. Norman, Principles of HCI, User-centered Design. Measurable Human factors.					
Mapping of Course Outcomes C for Unit I	201				
Unit II	UNDERSTANDING THE HUMAN and INTERACTION	HUMAN (06 hrs)			
Input-output channels, Human memory, Human emotions, Individual differences, Psychology. Ergonomics, Human errors, Models of interaction, Paradigms of Interactions, Interaction styles, Interactivity, Context of interaction, User experience.					

Mapping of Course Outcomes	CO2			
for Unit II				
Unit III	HCI MODELS AND THEORIES	(06 hrs)		
User Profiles, categorization of u	sers, Goal and task hierarchy model, Linguistic	model, Physical and device		
models, GOMS, Norman's 7 stage	e model, Cognitive architectures, Hierarchical	task analysis (HTA), Uses of		
task analysis, Diagrammatic dialo	g design notations.			
Mapping of Course Outcomes	CO3			
for Unit III				
Unit IV	DESIGN PROCESS	(06 hrs)		
Design Rules : Principles that sup	port usability, Design standards, Design Guidel	ines, What is interaction		
design?, The software design	process, User focus, Scenarios, Navigation	Design, Screen Design,		
Prototyping techniques, Wire-Fra	ming, Understanding the UI Layer and Its Execu	ition Framework, Model-		
View-Controller(MVC) Framewor	k			
Mapping of Course Outcomes	CO4			
for Unit IV				
	HCI GUIDELINES AND EVALUATION	(06 hrs)		
Onit V	TECHNIQUES	(06 hrs)		
Using toolkits, User interface	management system (UIMS), Goals of eva	luation, Categorization of		
Evaluation techniques, Choosing	g an Evaluation Method. DECIDE, Heuristic	Evaluation, cognitive walk		
through, Usability testing				
Mapping of Course Outcomes	CO5			
for Unit V				
Unit VI	FUTURE TRENDS	(06 hrs)		
Libiquitous Computing Design	thinking Finding things on web Augmented	Reality Virtual Reality		
Challenges in designing interfaces for smart homes smart devices handheld devices smart wrist watch				
Future of HCI				
Mapping of Course Outcomes	CO6			
for Unit VI

	Savi	tribai Phule Pune University,	Pune		
Third Year Information Technology (2019 Course)					
	314445(A) : Ele	ctive -I : Design and Analysis	of Algorithm		
Teaching Scheme: Credit Scheme: Examination Scheme:					
Theory (TH) : 3 hrs/week O3 Credits Mid_Semester : 30 Marks End Semester : 70 Marks					
Pre	erequisite Courses:				
1.	Data Structures and Algorithms				
2.	Discrete Structures.				
3.	Basic mathematics: Induction, p	probability theory, logarithms.			
οι	irse Objectives:				
1.	To understand the problem solv	ving and problem classification.			
2.	To know the basics of computa	tional complexity analysis of variou	us algorithms.		
3.	To provide students with found	dations to deal with a variety of co	mputational problems using		
	different design strategies.				
4.	To select appropriate algorithm	design strategies to solve real wor	rld problems.		
5.	To understand the concept of n	ondeterministic polynomial algorit	hms.		
Со	ourse Outcomes:				
Or	n completion of the course, stude	ents will be able to-			
CO	01: Calculate computational com	plexity using asymptotic notations	for various algorithms.		
CC	92: Apply Divide & Conquer as w	ell as Greedy approach to design a	lgorithms.		
CC	03: Understand and analyze optin	nization problems using dynamic p	rogramming.		
CC	94: Illustrate different problems	using Backtracking.			
CC	05: Compare different methods c	of Branch and Bound strategy.			
CC	96: Classify P, NP, NP-complete, N	NP-Hard problems.			
		COURSE CONTENTS			
	Unit I	INTRODUCTION	(07 hrs)		
Pro	oof Techniques: Contradiction,	Mathematical Induction, Direct p	proofs, Proof by counter examp	le,	
Pro	oof by contraposition.				
An	alysis of Algorithm: Efficiency- A	Analysis framework, asymptotic no	tations – big O, theta and		
on	nega.				
An	alysis of Non-recursive and rec	ursive algorithms: Solving Recurre	ence Equations using Masters		
the	eorem and Substitution method				
Br 8 c	ute Force method: Introduction queens' problem.	to Brute Force method & Exhaust	tive search, Brute Force solution	to	

Mapping of Course Outcomes for Unit I	CO1			
Unit II	DIVIDE AND CONQUER AND GREEDY METHOD	(06 hrs)		
Divide & Conquer: General meth	od, Quick Sort – Worst, Best and average case.	Binary search, Finding Max-		
Min, Large integer Multiplication	(for all above algorithms analysis to be done w	vith recurrence).		
Greedy Method: General metho	d and characteristics, Kruskal's method for MS	ST (using nlogn complexity)		
Dijkstra's Algorithm, Fractional K algorithm in transport network	napsack problem, Job Sequencing, Max flow p	roblem and Ford-Fulkersor		
Mapping of Course Outcomes for Unit II	CO1, CO2			
Unit III	DYNAMIC PROGRAMMING	(06 hrs)		
General strategy , Principle of op Ford Algorithm, Multistage Graph	timality, 0/1 knapsack Problem, Coin change- problem (using Forward computation), Trave	making problem, Bellman- lling Salesman Problem		
Mapping of Course Outcomes for Unit III	CO1, CO3			
Unit IV	BACKTRACKING	(06 hrs)		
General method , Recursive backtracking algorithm, Iterative backtracking method. n-Queen problem, Sum of subsets, Graph coloring, 0/1 Knapsack Problem.				
Mapping of Course Outcomes for Unit IV	CO1, CO4			
Unit V	BRANCH AND BOUND	(06 hrs)		
The method , Control abstractions for Least Cost Search, Bounding, FIFO branch and bound, LC branch and bound, 0/1 Knapsack problem – LC branch and bound and FIFO branch and bound solution, Traveling salesperson problem- LC branch and bound				
Mapping of Course Outcomes for Unit V	CO1, CO5			
Unit VI	COMPUTATIONAL COMPLEXITY	(05 hrs)		
Non Deterministic algorithms, The classes: P, NP, NP Complete, NP Hard, Satisfiability problem, Proofs for NP Complete Problems: Clique, Vertex Cover				
Mapping of Course Outcomes for Unit VI	CO1, CO6

Savitribai Phule Pune University, Pune				
Third Yea	ar Information Technology (201	.9 Course)		
314445(B): Electiv	e -I : Advanced Database Mana	agement System		
Teaching Scheme:	Credit Scheme:	Examination Scheme:		
Theory (TH):3 hrs/week	03 Credits	Mid_Semester: 30 Marks End_Semester: 70 Marks	5	
Prerequisite Courses:				
1. Database Management System	1			
Course Objectives:				
1. To understand the fundamen	tal concepts of Relational and Object	-oriented databases.		
2. To learn and understand varia	ous Parallel and Distributed Databas	e Architectures and Application	ns.	
3. To understand and apply the	basic concepts, categories and tools	of NoSQL Database.		
4. To learn and understand Data	warehouse and OLAP Architectures	and Applications.		
5. To learn data mining architect	ture, algorithms, software tools and a	applications.		
6. To learn enhanced data mode		15.		
Course Outcomes:				
On completion of the course, stud	lents will be able to-			
CO1: Differentiate relational and of	bject-oriented databases.			
CO2: Illustrate parallel & distributed	d database architectures.			
CO3: Apply concepts of NoSQL Dat	tabases.			
CO4: Explain concepts of data warel	nouse and OLAP technologies.			
CO5: Apply data mining algorithm	is and various software tools.			
CO6: Comprehend emerging and e	nhanced data models for advanced a	applications.		
	COURSE CONTENTS			
Unit I	REVIEW OF RELATIONAL DATA MO	DEL AND (06 hrs)		
	RELATIONAL DATABASE CONSTR	AINTS		
Relational model concepts, Relational model constraints and relational database schemas, Update				
operations, anomalies, dealing with constraint violations, Types and violations. Overview of Object -				
Encapsulation, class hierarchies, polymorphism examples.				
Mapping of Course Outcomes for Unit I	CO1			
Unit II	PARALLEL AND DISTRIBUTED DAT	ABASES (06 hrs)		
Introduction to Parallel Databa	ases, Architectures for parallel da	atabases, Parallel query eva	luatio	
Parallelizing individual operation	s, Parallel query optimizations. Int	roduction to distributed data	abases	
Distributed DBMS architectures, storing data in a Distributed DBMS, Distributed catalog management,				
Distributed Query processing, U	pdating distributed data, Distribute	ed transactions,		
Distributed Concurrency control and Recovery.				

Mapping of Course Outcomes	CO2			
for Unit II				
Unit III	NOSQL DATABASES	(06 hrs)		
Introduction, Overview, and Hist	ory of NoSQL Databases- The definition of Fou	r Types of No SQL		
Databases. NoSQL Key/Value Da	tabase: MongoDB, Column-Oriented Databas	e: Apache Cassandra,		
Comparison of Relational and No	SQL databases, NoSQL database Development	Tools (Map		
Manning of Course Outcomes				
for Unit III				
		(06 hrs)		
Architectures and companying of	Edata warehouse. Characteristics and limitation	(00 III's)		
warehouse schema (Star, Snowfla support system, Views and Decisi	ake), OLAP Architecture (ROLAP/MOLAP/HOLAF	P), Introduction to decision		
Mapping of Course Outcomes for Unit IV	CO4			
Unit V	DATA MINING	(06 hrs)		
Introduction to Data Mining, KDI predictive and descriptive algorit Mapping of Course Outcomes for Unit V	Introduction to Data Mining, KDD seven step process, Architecture of data mining, Introduction to predictive and descriptive algorithms, Data mining software and applications Mapping of Course Outcomes CO5 for Unit V			
Unit VI	Unit VI ENHANCED DATA MODELS FOR ADVANCED (06 hrs)

Savitribai Phule Pune University, Pune Third Year Information Technology (2019 Course) 314445(C) : Elective -I : Design Thinking					
Teaching Scheme: Credit Scheme: Examination Scheme:					
Theory (TH) : 3 hrs/week	Theory (TH) : 3 hrs/week O3 Credits Mid_Semester : 30 Marks End_Semester : 70 Marks				
Prerequisite Courses:					
1. Software Engineering, 2. Proble	em Solving				
Companion Course: Human Comp	uter Interaction				
Course Objectives:					
1. To learn the Design thinking ba	sic concepts.				
2. To identify the opportunities ar	nd challenges for design thinking inn	ovation.			
3. To describe the define and idea	te process of design thinking.				
4. To summarize the prototyping	techniques.				
5. To enlist the activities carried o	ut in Test and reflect phase of desig	n thinking			
6. To Interpret Design Thinking ca	se studies.				
Course Outcomes:					
On completion of the course, stude	ents will be able to-				
CO1: Identify need and features of	CO1: Identify need and features of design thinking.				
CO2: Identify the opportunities and challenges for design thinking innovation.					
CO3: Learn the process of design	n thinking using various tools.				
CO4: Summarize and learn the var	ious prototyping techniques.				
CO5: Enlist the activities carried ou	ut in Test and reflect phase of design	n thinking			
CO6: Interpret the design thinking	disruptive innovations through case	studies.			
COURSE CONTENTS					
Unit I INTRODUCTION TO DESIGN THINKING (06 hrs)					
Introduction to Design and Design Thinking, Definition of Design Thinking, Need of Design Thinking,					
Features of Design Thinking, Problem Solving and Design, Design thinking as Strategy of Innovation, Use					
of Design Thinking, Design Thinking-Attributes, The Principles of Design Thinking, The Five-step Process					
of Design Thinking(Empathize, Define, Ideate, Prototype, Test),Design Thinking-A Solution based					
thinking: Design Thinking vs. Scientific Method, Problem Focused vs. Solution Focused, Analysis vs.					
Synthesis, Divergent Thinking vs. Convergent Thinking , Roots of Design Thinking in					
Human Centric Design Process.					
Mapping of Course Outcomes CO1 for Unit I					
Unit II EXPLORE AND EMPATHIZE (06 hrs)					

Curriculum for Third Year of Information Technology (2019 Course), Savitribai Phule Pune University

Explore-STEEP Analysis, Activity S	Systems, Stakeholder Analysis, Framed Opport	unities
Empathise- Observation, Problem statement, User Interviews- Interview for Empathy, Explorative		
Interview, Ask 5x Why, 5W+H q	uestions (Design Thinking Toolbox), Needs Fir	nding, Empathy Map,
Persona Development, Customer	Journey Map	
Mapping of Course Outcomes	CO2	
for Unit II		
Unit III	DEFINE AND IDEATE	(06 hrs)
Define- Define Point of view, "H	low might we" question, Storytelling, Con	text Mapping
Ideate-Brainstorming, 2x2 Matrix		
Ideate- Purpose, Methods & Tools	s, SCAMPER, SCAMPER for Ideation, SCAMPER	template, Analogous
Inspiration, IDEATION using Deco	nstruct & Reconstruct, User Experience Journey	/
Mapping of Course Outcomes	CO3	
for Unit III		
Unit IV	PROTOTYPE	(06 hrs)
Get Visual, Design Principals, Det	ermine What to Prototype, Storyboard	
Prototype- How to carry out Proto	otyping? Frequently used kinds of prototypes, I	Focused experiments
– Critical Experience Prototype (C	Critical Experience Prototype (CEP) & Critical Function Prototype (CFP), Crazy experiments – Dark	
horse Prototype, Combined expe	riments – Funky prototype	
Prototyping -Paper Prototyping,	Digital Prototyping- Wireframe vs Realistic Pr	rototypes, HTML vs
WYSIWYG Editors, Additional Too	Is for Prototyping, Working with a Developer, P	rototype Examples
Mapping of Course Outcomes	CO4	
for Unit IV		
Unit V	TEST AND REFLECT	(06 hrs)
Test- Testing Sheet, Feedback Ca	apture Grid, Powerful questions in experience	e testing, Solution interview
Structured Usability Testing, A/E	3 Testing, Design Testing with Users, Explori	ng Visual Design Mock-Up
Choosing a Design Testing, Usab	ility Testing, Reflect- I like, I wish, I wonder,	Create a pitch, lean canva
lessons learned, Road map for in	nplementation Evolve- Concept	
Synthesis, Viability Analysis(Impac	t Evaluation), Innovation Tool using user need	s, CAP, 4s.
Mapping of Course Outcomes	C05	
for Unit V		
Unit VI	DISRUPTIVE INNOVATION	(06 hrs)
Reimagining the Trade Show Expe	erience at IBM, Redesigning the Customer Cont	tact Center at Toyota, Socia
Networking at MeYou Health, Re	thinking Subsidized Meals for the Elderly at Th	e Good Kitchen THE SOCIAL
PROBLEM		
Design Thinking in Healthcare wit	h IDEO, Design Thinking Transformed Airbnb,	IBM Design Thinking:
A Framework To Help Teams Cont	inuously Understand and Deliver, UberEATS.	
Napping of Course Outcomes	СОР	
for Unit VI

S	avitribai Phule Pune Universi	ty, Pune	
Third Year Information Technology (2019 Course)			
314445(D): Elective -I : Internet of Things			
Teaching Scheme:	Credit Scheme:	Exa	mination Scheme:
Theory (TH):3 hrs/week	03 Credits	Mid_s End_s	Semester : 30 Marks Semester : 70 Marks
Prerequisite Courses:			
 Basics of Computer Networ Processor Architecture 	k		
Course Objectives:			
1. To know the IoT fundamentals and understanding the technologies.			
2. To learn the concept of M2M (machine to machine) with necessary protocols.			
3. To understand the Python Scripting Language and controlling hardware for IoT.			
4. To learn the IoT Platforms widely used in IoT applications.			
5. To understand the implem	entation of web-based services on	oT devices w	ith cloud interface.
6. To introduce the IoT application	itions.		
Course Outcomes:			
On completion of the course, students will be able to-			
CO1: Discuss fundamentals, arc	hitecture and framework of IoT.		
CO2: Select suitable sensors and	actuators for real time scenarios.		
CO3: Justify the significance of	protocol for wireless communicatio	n and IoT cha	illenges
CO4: Understand the Python pr	ogramming for development of IoT	applications	
CO5: Understand the cloud inte	rfacing technologies.		
CO6: Design and Implement rea	l time IoT applications.		
	COURSE CONTENTS		
Unit I	INTRODUCTION TO IC	DT	(06 hrs)
Definition and Characteristics	of IoT, IoT Framework and Arch	nitecture, Ph	ysical Design of IoT – IoT
Protocols, IoT communication	models, IoT Communication APIs,	IoT Levels ar	nd Templates, IoT Enabled
Technologies – Wireless Sensor	Networks, Cloud Computing, Emb	edded Syster	ms, Big Data Analysis, UAV,
Neb Services, IoT & M2M- Mad	hine to Machine, Difference betw	een IoT and I	M2M,
Software Defined Network & NF	V		
Mapping of Course Outcomes or Unit I	C01		
Unit II	THINGS IN IOT		(06 hrs)
ntroduction to Sensors - Lig Detection Sensors, Wireless Measurement with ultrasonic s Power devices, Servo motor, S Protocols: 12C SPL LIART LISET	ht sensor, voltage sensor, Temp Sensors, Level Sensors, USB S ensor Introduction to Actuators- beed DC Motor. Electronic Comm	erature and ensors, Eml Connecting L unication Pro	Humidity Sensor, Motion Dedded Sensors, Distance ED, Buzzer, Controlling- AC Ditocols (Device Interfacing)

Mapping of Course Outcomes	CO2		
for Unit II			
Unit III	COMMUNICATION PROTOCOLS AND IOT CHALLENGES	(06 hrs)	
Introduction to Non-IP Based Pro	otocol (IEEE 802.11, IEEE 802.15.4), BlueTooth,	ZigBee, IP Based Protocol	
IPV4, IPV6, 6LoWPAN), Application Layer Protocols (MQTT, AMQP) Wireless medium access issues, MAC			
protocol, routing protocols, Sensor deployment & Node discovery, Data aggregation			
& dissemination.			
Mapping of Course Outcomes	CO3		
for Unit III			
Unit IV	IOT PLATFORMS AND ITS PROGRAMMING	(06 hrs)	
Introduction to Arduino and Ras	bberry Pi- Installation, Interfaces (Serial, SPI, I20	C), Introduction to Python	
program with Raspberry Pi with fo	ocus on interfacing external gadgets (Bluetoot	h Speaker, CCTV Camera,	
Robotic Arm etc.). controlling out	put, and reading input from pins. Introduction	to Arduino	
Programming Integration of Sensors and Actuators with Arduino			
Mapping of Course Outcomes	lapping of Course Outcomes CO4		
for Unit IV			
	IOT PHYSICAL SERVERS AND CLOUD		
Unit V	OFFERINGS	(06 hrs)	
Introduction to Cloud Storage r	nodels (SaaS, Paas, JaaS) and communication	APIs Webserver – Web	
server for IoT Cloud for IoT (Thin	gSpeak []bidots) Python web application fram	nework Designing a	
server for IOT, Cloud for IOT (ThingSpeak, Ubidots), Python web application framework, Designing a

Savitribai Phule Pune University, Pune			
Third Year Information Technology (2019 Course)			
314446 : Operating Systems Lab			
Teaching Scheme:	Credit Scheme:	Examination Scheme:	
Practical (PR): 4 hrs/week	02 Credits	PR: 25 Marks TW: 25 Marks	
Prerequisites:			
1. C Programming			
2. Fundamentals of Data Structur	e		
1 To introduce and learn Linux of	mmands required for administrati	on	
2 To learn shell programming co	 To introduce and learn Linux commands required for administration. To loarn shell programming concepts and applications. 		
3. To demonstrate the functioning	neepts and applications.	processes, threads under the	
LINUX.			
 To demonstrate the functioning of OS concepts in user space like concurrency control (process synchronization, mutual exclusion), CPU Scheduling, Memory Management and Disk Scheduling in LINUX. 			
 To demonstrate the functioning of Inter Process Communication under LINUX. To study the functioning of OS concepts in kernel space like embedding the system call in any LINUX kernel. 			
Course Outcomes:			
On completion of the course, stud	ents will be able to-		
CO1: Apply the basics of Linux com	mands.		
CO2: Build shell scripts for various a	pplications.		
CO3: Implement basic building bloc	ks like processes, threads under the	e Linux.	
CO4: Develop various system progr	ams for the functioning of OS con	cepts in user space like concurrency	
control, CPU Scheduling, Memory I	Management and Disk Scheduling i	n Linux.	
CO5: Develop system programs for Inter Process Communication in Linux.			
	Guidelines for Instructor's Manua	ıl

	Guidelines for Student's Lab Journ	al	
1. Student should submit term w	ork in the form of handwritten j	ournal based on specified list of	
assignments.			
2. Practical Examination will be bas	ed on the term work.		
 Candidate is expected to know t The practical examination shoul complete in all aspects. 	he theory involved in the experime	nt. journal of the candidate is	

Guidelines for Lab /TW Assessment

- 1. Examiners will assess the term work based on performance of students considering the parameters such as timely conduction of practical assignment, methodology adopted for implementation of practical assignment, timely submission of assignment in the form of handwritten write-up along with results of implemented assignment, attendance etc.
- **2.** Examiners will judge the understanding of the practical performed in the examination by asking some questions related to the theory & implementation of the experiments he/she has carried out.
- **3.** Appropriate knowledge of usage of software and hardware related to respective laboratory should be checked by the concerned faculty member.

Guidelines for Laboratory Conduction

As a conscious effort and little contribution towards Green IT and environment awareness, attaching printed papers of the program in journal may be avoided. There must be hand-written write-ups for every assignment in the journal. The DVD/CD containing student's programs should be attached to the journal by every student and same to be maintained by department/lab In-charge is highly encouraged. For reference one or two journals may be maintained with program prints at Laboratory.

List of Laboratory Assignments

Group A

Assignment No. 1:

A. Study of Basic Linux Commands: echo, ls, read, cat, touch, test, loops, arithmetic comparison, conditional loops, grep, sed etc.

B. Write a program to implement an address book with options given below: a) Create address book. b) View address book. c) Insert a record. d) Delete a record. e) Modify a record. f) Exit

Assignment No. 2:

Process control system calls: The demonstration of FORK, EXECVE and WAIT system calls along with zombie and orphan states.

A. Implement the C program in which main program accepts the integers to be sorted. Main program uses the FORK system call to create a new process called a child process. Parent process sorts the integers using sorting algorithm and waits for child process using WAIT system call to sort the integers using any sorting algorithm. Also demonstrate zombie and orphan states.

B. Implement the C program in which main program accepts an array. Main program uses the FORK system call to create a new process called a child process. Parent process sorts an array and passes the sorted array to child process through the command line arguments of EXECVE system call. The child process uses EXECVE system call to load new program which display array in reverse order.

Assignment No. 3:

Implement the C program for CPU Scheduling Algorithms: Shortest Job First (Preemptive) and Round Robin with different arrival time.

Assignment No. 4:

A. Thread synchronization using counting semaphores. Application to demonstrate: producerconsumer problem with counting semaphores and mutex.

B. Thread synchronization and mutual exclusion using mutex. Application to demonstrate: Reader-Writer problem with reader priority.

Assignment No. 5:

Implement the C program for Deadlock Avoidance Algorithm: Bankers Algorithm.

Assignment No. 6:

Implement the C program for Page Replacement Algorithms: FCFS, LRU, and Optimal for frame size as minimum three.

Assignment No. 7:

Inter process communication in Linux using following.

A. FIFOS: Full duplex communication between two independent processes. First process accepts sentences and writes on one pipe to be read by second process and second process counts number of characters, number of words and number of lines in accepted sentences, writes this output in a text file and writes the contents of the file on second pipe to be read by first process and displays on standard output.

B. Inter-process Communication using Shared Memory using System V. Application to demonstrate: Client and Server Programs in which server process creates a shared memory segment and writes the message to the shared memory segment. Client process reads the message from the shared memory segment and displays it to the screen.

Assignment No. 8: Implement the C program for Disk Scheduling Algorithms: SSTF, SCAN, C-Look considering the initial head position moving away from the spindle.

Study Assignment: Implement a new system call in the kernel space, add this new system call in the Linux kernel by the compilation of this kernel (any kernel source, any architecture and any Linux kernel distribution) and demonstrate the use of this embedded system call using C program in user space.

Savitribai Phule Pune University, Pune Third Year Information Technology (2019 Course) 314447: Human Computer Interaction Laboratory		
Teaching Scheme:	Teaching Scheme: Credit Scheme: Examination Scheme:	
Practical (PR): 2 hrs/week	01 Credits	OR: 50 Marks
Prerequisites: 1. Problem Solving and Object-Or	iented Technologies	
Course Objectives:		
 To gain an understanding of th To learn to do design and evaluation To study HCI models and theo To understand HCI design procession To apply HCI to real life use cal 	he human part of human-computer-in uate effective human-computer-inte ries. cesses. ses.	nteractions. ractions.
Course Outcomes:		
On completion of the course, stud	ents will be able to-	
CO1: Differentiate between good of	esign and bad design.	
CO2: Analyze creative design in the	e surrounding.	
CO3: Assess design based on feedb	ack and constraint.	
CO4: Design paper-based prototyp	es and use wire frame.	
CO5: Implement user-interface de	sign using web technology.	
CO6: Evaluate user-interface desig	nusing HCI evaluation techniques.	
	Guidelines for Instructor's Manual	
The faculty member should preparavailable to students and laborato The instructor's manual should in guidelines, topics under considerat	e the laboratory manual for all the erry instructor/Assistant. clude prologue, university syllabus ion-concept, objectives, outcomes, r	experiments, and it should bemade , conduction & Assessment eferences.
	Guidelines for Student's Lab Journa	l
 The laboratory assignments a consists of prologue, Certificate Objectives, Problem Statemen Assessment grade/marks and 	re to be submitted by students in e, table of contents, and handwritten t, Outcomes, software & Hardware assessor's sign, Theory Concept, p	the form of journals. The Journal write-up of each assignment (Title, requirements, Date of Completion, rintouts of the code written using

coding standards, sample test cases etc. To support Go-green, printouts should be asked to any 2 students from each batch. However, all students must submit the soft copy and should be maintained by batch teacher.

- 2. Oral Examination will be based on the HCI theory and HCI lab term work.
- 3. Candidate is expected to know the theory involved in the experiment.
- **4.** The Oral examination should be conducted if the journal of the candidate is completed in all respects and certified by concerned faculty and head of the department.
- 5. All the assignment mentioned in the syllabus must be conducted.

Guidelines for Lab /TW Assessment

- 1. Examiners will assess the term work based on performance of students considering the parameters such as timely conduction of practical assignment, methodology adopted for implementation of practical assignment, timely submission of assignment in the form of handwritten write-up along with results of implemented assignment, attendance etc.
- 2. Examiners will judge the understanding of the practical performed in the examination by asking some questions related to theory & implementation of experiments he/she has carried out.
- **3.** Appropriate knowledge of usage of software and hardware such as tags, coding standards, design flow to be implemented etc. should be checked by the concerned faculty member(s).

Guidelines for Laboratory Conduction

The instructor is expected to frame the assignments by understanding the prerequisites, technological aspects, utility and recent trends related to the topic. The instructor may set multiple sets of assignments and distribute among batches of students. It is appreciated if the assignments are based on real world problems/applications. All the assignments should be conducted on 64-bit open-source software.

Guidelines for Oral Examination

Both internal and external examiners should jointly conduct Oral examination. During assessment, the examiners should give the maximum weightage to the satisfactory answer of the problem statement in question. The supplementary and relevant questions may be asked at the time of evaluation to judge the student's understanding of the fundamentals, effective and efficient implementation.

List of Laboratory Assignments

Group A: CO1,2,3

1. Identify and observe bad designs

Students are expected to submit minimum of 3 to 5 photographs of bad designs in their surrounding or home or any product or neighborhood and create a report mentioning why is it bad? They can submit word/pdf file having photos and description, source of photos and place and mention why is it bad and discuss the outcome during lab session.

2. "The Jugad":

Humans are very creative and often use it to get work done with available set up and resources. Students are expected to identify Jugad (things used creatively but not meant for that) things and submit minimum of 3 to 5 photographs of jugad in their surrounding or home or neighborhood. Prepare a report mentioning the Jugad and source of photos. Discuss the outcome during lab session.

3. Feedback and Constraint:

Products or interfaces should offer useful feedback to understand the state and have constraints to avoid mistakes while using them. Students are expected to identify and analyze minimum of 5

interfaces or products offering feedback and constraint. Prepare a report clearly showcasing feedback and constraint and support it with minimum of 5 photographs taken in their surrounding or home or neighborhood. Discuss the outcome during lab session

Group B: CO 4,5

4. Prototype and wire frame:

Students are expected to choose a problem statement and identify -

Types of users going to use (age, experience, environmental conditions during use etc..) Minimum 3 scenarios of use Create paper-based prototypes for scenarios. Use any open-source tool to wire frame scenarios.

5. CSS:

Students are expected to design minimum of 5 web pages using CSS for the problem statement chosen in assignment no. 4. Apply CSS properties Border, margins, Padding, Navigation, dropdown list to page

Group C: CO 5,6

1. CMS tool:

Develop website using any CMS tool which falls into one of the categories blog, social networking, News updates, Wikipedia, E-commerce store. Website must include home page, and at least 5 forms. Use WordPress/Joomla/Drupal/PHP/CSS/Bootstrap/JavaScript.

2. Evaluation of Interface:

Students are expected to evaluate minimum of two products / software interface against known HCI evaluation.

Data preparation: Download heart dataset from following link. https://www.kaggle.com/zhaoyingzhu/heartcsv Perform following operation on given dataset. Find Shape of Data a) b) **Find Missing Values** c) Find data type of each column d) Finding out Zero's e) Find Mean age of patients f) Now extract only Age, Sex, ChestPain, RestBP, Chol. Randomly divide dataset in training (75%) and testing (25%). Through the diagnosis test I predicted 100 report as COVID positive, but only 45 of those were actually positive. Total 50 people in my sample were actually COVID positive. I have total 500 samples. Create confusion matrix based on above data and find I. Accuracy II. Precision III. Recall IV. F-1 score 2. Assignment on Regression technique Download temperature data from below link. https://www.kaggle.com/venky73/temperaturesof-india?select=temperatures.csv This data consists of temperatures of INDIA averaging the temperatures of all places month wise. Temperatures values are recorded in CELSIUS

a. Apply Linear Regression using suitable library function and predict the Month-wise

temperature.

- b. Assess the performance of regression models using MSE, MAE and R-Square metrics
- c. Visualize simple regression model.

3. Assignment on Classification technique

Every year many students give the GRE exam to get admission in foreign Universities. The data set contains GRE Scores (out of 340), TOEFL Scores (out of 120), University Rating (out of 5), Statement of Purpose strength (out of 5), Letter of Recommendation strength (out of 5), Undergraduate GPA (out of 10), Research Experience (0=no, 1=yes), Admitted (0=no, 1=yes). Admitted is the target variable.

Data Set Available on kaggle (The last column of the dataset needs to be changed to 0 or 1)Data Set : <u>https://www.kaggle.com/mohansacharya/graduate-admissions</u>

The counselor of the firm is supposed check whether the student will get an admission or not based on his/her GRE score and Academic Score. So to help the counselor to take appropriate decisions build a machine learning model classifier using Decision tree to predict whether a student will get admission or not.

Apply Data pre-processing (Label Encoding, Data Transformation....) techniques if necessary.

Perform data-preparation (Train-Test Split)

C. Apply Machine Learning Algorithm

D. Evaluate Model.

4. Assignment on Improving Performance of Classifier Models

A SMS unsolicited mail (every now and then known as cell smartphone junk mail) is any junk message brought to a cellular phone as textual content messaging via the Short Message Service (SMS). Use probabilistic approach (Naive Bayes Classifier / Bayesian Network) to implement SMS Spam Filtering system. SMS messages are categorized as SPAM or HAM using features like length of message, word depend, unique keywords etc.

Download Data -Set from : <u>http://archive.ics.uci.edu/ml/datasets/sms+spam+collection</u> This dataset is composed by just one text file, where each line has the correct class followed by the raw message.

- a. Apply Data pre-processing (Label Encoding, Data Transformation....) techniques if necessary
- b. Perform data-preparation (Train-Test Split)
- c. Apply at least two Machine Learning Algorithms and Evaluate Models
- d. Apply Cross-Validation and Evaluate Models and compare performance.
- e. Apply Hyper parameter tuning and evaluate models and compare performance.

5. Assignment on Clustering Techniques

Download the following customer dataset from below link:

Data Set: https://www.kaggle.com/shwetabh123/mall-customers

This dataset gives the data of Income and money spent by the customers visiting a Shopping Mall. The data set contains Customer ID, Gender, Age, Annual Income, Spending Score. Therefore, as a mall owner you need to find the group of people who are the profitable customers for the mall owner. Apply at least two clustering algorithms (based on Spending Score) to find the group of customers.

- a. Apply Data pre-processing (Label Encoding , Data Transformation....) techniques if necessary.
- b. Perform data-preparation(Train-Test Split)

- c. Apply Machine Learning Algorithm
- d. Evaluate Model.
- e. Apply Cross-Validation and Evaluate Model

6. Assignment on Association Rule Learning

Download Market Basket Optimization dataset from below link.

Data Set: <u>https://www.kaggle.com/hemanthkumar05/market-basket-optimization</u>

This dataset comprises the list of transactions of a retail company over the period of one week. It contains a total of 7501 transaction records where each record consists of the list of items sold in one transaction. Using this record of transactions and items in each transaction, find the association rules between items.

There is no header in the dataset and the first row contains the first transaction, so mentioned header = None here while loading dataset.

- a. Follow following steps :
- b. Data Preprocessing
- c. Generate the list of transactions from the dataset
- d. Train Apriori algorithm on the dataset
- e. Visualize the list of rules

F. Generated rules depend on the values of hyper parameters. By increasing the minimum confidence value and find the rules accordingly

7. Assignment on Multilayer Neural Network Model

Download the dataset of National Institute of Diabetes and Digestive and Kidney Diseases from below link :

Data Set: <u>https://raw.githubusercontent.com/jbrownlee/Datasets/master/pima-indians-diabetes.data.csv</u>

The dataset is has total 9 attributes where the last attribute is "Class attribute" having values 0 and 1. (1="Positive for Diabetes", 0="Negative")

- a. Load the dataset in the program. Define the ANN Model with Keras. Define at least two hidden layers. Specify the ReLU function as activation function for the hidden layer and Sigmoid for the output layer.
- b. Compile the model with necessary parameters. Set the number of epochs and batch size and fit the model.
- c. Evaluate the performance of the model for different values of epochs and batch sizes.
- d. Evaluate model performance using different activation functions Visualize the model using ANN Visualizer.

Savitribai Phule Pune University, Pune Third Year Information Technology (2019 Course)					
314448 (1	3) : Laboratory Practice-I (ADBI	MS)			
Teaching Scheme:	Credit Scheme	Examination Scheme:			
Practical (PR) :4 hrs/week	s/week 02 Credits PR : 25 Marks TW : 25 Marks				
Prerequisites: 1. Database Management System					
Course Objectives:					
1 To learn and understand Datab	ase Modeling Architectures				
2. To learn and understand Advan	ced Database Programming Framew	vorks.			
3. To learn NoSQL Databases (Ope	en source) such as MongoDB.				
4. To design and develop applicat	ion using NoSQL Database.				
5. To design data warehouse sche	ma for given system.				
Course Outcomes:					
On completion of the course, stude	ents will be able to				
CO1: Apply advanced Database Programming Languages.					
CO2: Apply the concepts of NoSQL Databases.					
CO3: Install and configure database systems.					
CO4: Populate and query a databas	e using MongoDB commands.				
CO5: Design data warehouse schema of any one real-time: CASE STUDY					
CO6: Develop small application wit	h NoSQL Database for back-end.				
Guidelines for Instructor's Manual					
The faculty member should prepa made available to students and lab	are the laboratory manual for all th oratory instructor/Assistant.	e experiments and it should be			
Guidelines for Student's Lab Journal					
1. Student should submit term work in the form of handwritten journal based on specified list of					
assignments.					
2. Practical Examination will be based on all the assignments in the lab manual					
3. Candidate is expected to know the theory involved in the experiment.					
4. The practical examination should be conducted if and only if the journal of the candidate is					
complete in all respects.					

Guidelines for Lab /TW Assessment

- Examiners will assess the student based on performance of students considering the parameters such as timely conduction of practical assignment, methodology adopted for implementation of practical assignment, timely submission of assignment in the form of handwritten write-up along with results of implemented assignment, attendance etc.
- 2. Appropriate knowledge of usage of software and hardware related to respective laboratory should be checked by the concerned faculty member.
- 3. As a conscious effort and little contribution towards Green IT and environment awareness, attaching printed papers of the program in journal may be avoided. There must be hand-written write-ups for every assignment in the journal. The DVD/CD containing student's programs should be attached to the journal by every student and same to be maintained by department/lab In- charge is highly encouraged. For reference one or two journals may be maintained with program prints at Laboratory.

Guidelines for Laboratory Conduction

- **1.** Group A assignments are compulsory and should be performed by individual student.
- 2. Group B case study may be performed in group of 3/4.
- **3.** Mini project of Group C can be implemented using any suitable front-end. But back-end must be MongoDB.

Guidelines for Practical Examination

- **1.** Practical Examination will be based on the all topics covered.
- **2.** Examiners will judge the understanding of the practical performed in the examination by asking some questions related to theory & implementation of experiments he/she has carried out.

List of Laboratory Assignments

Group A : MongoDB

- 1. Create a database with suitable example using MongoDB and implement
 - Inserting and saving document (batch insert, insert validation)
 - Removing document
 - Updating document (document replacement, using modifiers, up inserts, updating multipledocuments, returning updated documents)

• Execute at least 10 queries on any suitable MongoDB database that demonstrates following:

- a. Find and find One (specific values)
- Query criteria (Query conditionals, OR queries, \$not, Conditional semantics) Type-specific queries (Null, Regular expression, Querying arrays)
- c. \$ where queries
- d. Cursors (Limit, skip, sort, advanced query options)

2. Implement Map-reduce and aggregation, indexing with suitable example in MongoDB. Demonstrate the following:

- Aggregation framework
- Create and drop different types of indexes and explain () to show the advantage of the indexes.

3. Case Study: Design conceptual model using Star and Snowflake schema for any one database.

4. Mini Project

Pre-requisite: Build the mini project based on the requirement document and design prepared as a part of Database Management Lab in second year.

1. Form teams of around 3 to 4 people.

2. Develop the application:

Build a suitable GUI by using forms and placing the controls on it for any application. Proper data entry validations are expected.

Add the database connection with front end. Implement the basic CRUD operations.

3. Prepare and submit report to include: Title of the Project, Abstract, List the hardware and

software requirements at the backend and at the front end, Source Code, Graphical User Interface, Conclusion.

Guidelines for Laboratory Conduction

- 1. Students should be asked to form a group of 3 to 4 students and identify design challenge to provide the solution to real life engineering problems within the social, environmental and economic context.
- 2. All the assignments should be conducted using the templates provided in the reference books.
- **3.** The faculty member should help student to identify Online free or open source tools like diagrams.net, LucidChart, Draw.io, Creatly, Openboard, Microsoft whiteboard etc. which will help students to collaborate and draw diagram.
- **4.** After every assignment, student group should be asked to demonstrate their design and discuss findings.

Guidelines for Practical Examination

- **1.** Students will be provided with 2 problem statements options covering the detail design challenge statements and student will have to perform any one.
- 2. All the problem statements carry equal weightage.

List of Laboratory Assignments

Group A- CO1, CO2, CO3

Assignment-I-Inspiration Phase:

Perform STEEP analysis by using MAKING SENSE OF STEEP ANALYSIS & STRATEGIC PRIORITIES TEMPLATE and Frame Your Design Challenge. Conduct Interviews, design and ask 5x Why and 5W+H questions **Assignment-II-Empathize Phase:**

Observe the user and design Empathy Map, Generate persona/User profile and Customer Journey map Assignment-III- Define and Ideate:

Share Stories and learning from research- Cluster Insights into themes, Create Insights statements, create 'How might we' questions

Assignment-IV Prototype Phase:

Brainstorm, select your ideas, create a storyboard, determine what to prototype, start prototyping, Design Paper Prototype/digital Prototype, test your prototype and get feedback, Create your Action plan, create pitch, share your solution, perform reflection

 Question Answer session. 6) Guide should ensure that stud 7) Guide should give appropriate 8) Attendance of all other stude 	ents are doing literature survey instructions for effective presentation	and review in proper manner. ntation.			

Timeline is suggested to follow throughout the semester:

- 1) Week-01: Discussion to understand what is technical paper, how to search, where to search?
- 2) Week– 02: Download technical papers (minimum four), getting approved from Guide and Prepare abstract summary of all papers downloaded.
- 3) Week- 03 & 04: Read and understand in detail the decided research papers about the problem statement, techniques used, experimental details and results with conclusion from identified papers.
- 4) Week-05: Review of the studied papers by Guide / Panel.
- 5) Week 06 & 07: Search / Find equivalent techniques (other than the one proposed in technical paper) so performance / complexities can be improved (by amortized analysis, not actual implementation).
- 6) Week 08 & 09: Prepare presentation with outline as The topic, its significance, The research problem, Studied solutions (through research papers) with strengths and weaknesses of each solution, comparison of the solutions to research problem, future directions of work, probable problem statement of project, tentative plan of project work
- 7) Week 10: Write Seminar report.
- 8) Week 11: Deliver Presentation to Guide/ Panel.
- 9) Week-12: Verification of Seminar report and Submission.

Guidelines for Seminar report

- 1. Each student shall submit two copies of the seminar report in appropriate text editing tool/software as per prescribed format duly signed by the guide and Head of the department/Principal.
- 2. Broad contents of review report (20-25 pages) shall be
 - a) Title Page with Title of the topic, Name of the candidate with Exam Seat Number / Roll Number, Name of the Guide, Name of the Department, Institution, Year & University.
 - **b)** Seminar Approval Sheet/Certificate.
 - c) Abstract and Keywords.
 - d) Acknowledgments.
 - e) Table of Contents, List of Figures, List of Tables and Nomenclature.
 - f) Chapters need to cover topic of discussion
 - i. Introduction with section including organization of the report,
 - ii. Literature Survey
 - iii. Motivation, purpose and scope and objective of seminar
 - iv. Details of design/technology/Analytical and/or experimental work, if any/
 - v. Discussions and Conclusions,
 - vi. Bibliography/References (in IEEE Format),
 - vii. Plagiarism Check report,

3. Students are expected to use open source tools for writing seminar report, citing the references and plagiarism detection.

Guidelines for Lab /TW Assessment:

- **1.** A panel of reviewers constituted by seminar coordinator (where guide is one of the member of the panel) will assess the seminar during the presentation.
- 2. Student's attendance for all seminars is advisable.
- **3.** Rubric for evaluation of seminar activity:

;
;
;
j.

Third Year Information Technology (2019 Course)					
Mandatory Audit Course 5					
314450 (C)	:Foreign Language- (Japane	se Langua	ge-III)		
Teaching Scheme:	Credit Scheme:	Examinat	tion Scheme:		
Theory (TH) :1 hrs/week Non Credit Audit Course					
Prerequisite Courses, if any:		•			
 Students must have already st 	udied can read/write Hiragana ar	d Katakana	script		
 Students must have studied Ja Module 1 and 2 	apanese for beginners that includ	es the syllat	ous of Audit course		
Course Objectives:					
o familiarize students with-					
L. Japan Market needs: To meet	the needs of ever growing indus	try with res	pect to the Japanese		
language support.					
I. Japanese Culture and Mindset:	To get introduced to Japanese s	ociety and c	ulture through		
language.	more about Higher studies. Care	or opportup	itios in Ianan /		
3. Career opportunities: To know more about Higher studies, Career opportunities in Japan /					
4. Soft skills and self-development: To learn the manners, business culture and develop the					
confidence by gaining the knowledge of global perspective and cross-cultural studies.					
Course Outcomes:					
On completion of the course, stud	lents will be able to–				
.01: Do basic communication.			-1.411)		
.02: Demonstrate knowledge of Ja	panese script (reading, writing a	na listening : nnors and of	SKIIIS).		
COI: Pursue professional lananese	al anguage course	illers allu ei	ilquettes.		
	COURSE CONTENTS		(a)		
Unit I JAPANESE-BEGINNERS LEVEL (3 hrs Lecture + 3 hrs Self-study)					
Greeting, Self-introduction, Natio	nality, Languages, Hiragana, Kat	akana rules,	History of Kanji, Numbers,		
Days and Dates, Time, Age, Mob	ile number, Places, Relatives, Co	olors, Things	s, Vehicles. Introduction to		
rammar of basic particles, verbs	and adjectives, Culture/Others:	Business ca	ard exchange, Seasons and		
festivals in Japan, Kanjis: 1 to 10, Listening practice, Vocabulary and conversation practice.					
Reference:					
a. Revision of beginner level studied in Module1-2					
b. Nihongo Challenge Kanji - Lesson 1					

for Unit I	CO1				
Unit II	JAPANESE SCRIPT				
Introduction to Demonstrative	e pronouns (ko-so-a-do),Asking/requesting f	or something, Making			
sentences using various questio	sentences using various question words, Stating/asking age, nationality, profession ,Culture/Others:				
Information about Japanese standardized test (JLPT, NAT etc.),Kanjis:11 to 20,Listening practice					
Vocabulary and conversation pra	ctice.				
Reference:					
a. Minna no Nihongo I: Lesson 1	and 2 (Text book + Audio and Video)				
b. Nihongo Challenge Kanji - Le	sson 2				
Mapping of Course Outcomes	CO2				
for Unit II					
Unit III	BASIC JAPANESE GRAMMAR	(3 hrs Lecture + 3 hrs Self-study)			
Conversation at the shop, asking	price, location, Telling time and scheduling tas	sks, Introduction to Verb			
groups (root, present, past, nega	tive), Culture/Others: Conversation and Behav	vior at the shop, How to			
buy train tickets, Train manne	rs, Introduction to social issues and Japan	ese society, Kanjis: 21to			
30,Listening practice Vocabulary	and conversation practice.				
Reference:

SEMESTER – VI

Savitribai Dhula, Duna University, Duna					
Savitribal Phule Pune Oniversity, Pune Third Year Information Technology (2019 Course)					
314/51: Computer Network and Security					
Teaching Scheme: Credit Scheme: Examination Scheme:					
		Mid Semester : 30 Marks			
Theory (TH) : 3 hrs/week	03 Credit	End_Semester : 70 Marks			
Prerequisite Courses:					
1. Basics of Computer Network					
Companion Course:					
1. Cyber Security					
Course Objectives:					
To familiarize students with-					
1. The application layer services, r	esponsibilities and protocol.				
2. Fathom wireless network and d	ifferent wireless standards				
3. Differences in different wireles	s networks and to learn different n	echanism used at layers of			
wireless network.					
4. The concept of network security.					
5. Basic cryptographic techniques in application development.					
6. Cyber security vulnerabilities & study typical threats to modern digital systems.					
Course Outcomes:					
On completion of the course, stude	ents will be able to-				
CO1: Explain Responsibilities, service	es offered and protocol used at app	lication layer of network			
CO2: Apply concepts of wireless net	work and different wireless standar	ds.			
CO3: Recognize the Adhoc Networ	k's MAC layer, routing protocol and	Sensor network architecture. CO4:			
Implement the principal concepts	Implement the principal concepts of network security and Understand network security threats, security				
services, and countermeasures					
CO5: Apply basic cryptographic tec	CO5: Apply basic cryptographic techniques in application development.				
CO6: Gain a good comprehension of the landscape of cyber security					
Vulnerabilities & describe typical threats to modern digital systems.					
	COURSE CONTENTS				
Unit I	APPLICATION LAYER	(06 hrs)			
Client Server Paradigm: Communication using TCP and UDP, Peer to Peer Paradigm, Application Layer Protocols: DNS, FTP, TFTP, HTTP, SMTP, POP, IMAP, MIME, DHCP, TELNET.					

Mapping of Course Outcomes for Unit I	CO1			
Unit II	WIRELESS STANDARDS	(06 hrs)		
Wireless LANs: Fundamentals of	WLAN, Design goals, Characteristics, Network A	Architecture, IEEE 802.11		
components in IEEE 802.11 netv	vork, Physical Laver, MAC Sub Lavers : DCF, P	CF, Hidden and exposed		
station problem, Frame format,	Addressing Mechanism, IEEE 802.15.1 Blueto	ooth: ArchitectureLavers		
operational states, IEEE 802.16 WiMax: Services, Architecture, Lavers, comparison between Bluetooth				
IEEE 802.11 and IEEE 802.16.				
Mapping of Course Outcomes	CO2			
for Unit II				
Unit III	ADHOC AND WSN	(06 hrs)		
Applications of Sensor Network, Comparison with Ad Hoc Wireless Network, Sensor node architecture Issues and Challenges in Designing a Sensor Network, Classification of sensor network protocols, SENSOR NETWORK ARCHITECTURE: Layered Architecture, Clustered Architecture Mapping of Course Outcomes CO3				
Unit IV	INTRODUCTION TO NETWORK SECURITY	(06 hrs)		
Importance and Need for Security, Network Attacks- Passive, Active Network Security Threats:Unauthorized access, Distributed Denial of Service (DDoS) attacks, Man in the middle attacks, Conceptof Security Principles: Confidentiality and Privacy, Authentication, Authorization and Access Control,Integrity, Non- repudiation, Stream Ciphers: Substitution Cipher – Mono alphabetic Cipher,Polyalphabetic Substitution Cipher., Transposition Cipher: Rail-FenceBlock Ciphers modes: Electronic Code Book (ECB) Mode., Cipher Block Chaining (CBC) Mode., CipherFeedback Mode (CFB), Output Feedback (OFB) Mode.Mapping of Course OutcomesCO4				
for Unit IV		Γ		
Unit V	CRYPTOGRAPHIC ALGORITHM	(06 hrs)		
Mathematical preliminaries: Groups, Rings, Fields, Prime numbers, Symmetric key algorithms: Data Encryption Standards, Advanced Encryption Standard, Public Key Encryption and Hash function: RSA Digital signatures, Digital Certificates and Public Key Infrastructure: Private Key Management, Diffie Hellman key exchange, The PKIX Model				

for Unit V		CO5			
	Unit VI	INTRODUCTION TO CYBER SECURITY	(06 hrs)		
Intro Harr Chal atta Cybe	oduction to Cyber Security: E nful Acts-Malware, Phishing lenges and Constraints, Con cks, hardware attacks, Cyber er Espionage, Comprehensive	Basic Cyber Security Concepts, Layers of security, MIM Attack, DOS Attack, SQL Injection, nputer Criminals, Assets and Threat, Motive Threats-Cyber Warfare, Cyber Crime, Cyber Sta Cyber Security Policy	ty, Vulnerability, Threat, Internet Governance – of Attackers, Software alking, Cyber Terrorism,

Mapping of Course Outcomes for Unit I	CO1				
Unit II	MATHEMATICAL FOUNDATION OF BIG DATA	(07 Hrs)			
Probability: Random Variables and Joint Probability, Conditional Probability and concept of Markov chains, Tail bounds, Markov chains and random walks, Pair-wise independence and universal hashing Approximate counting, Approximate median. Data Streaming Models and Statistical Methods: Flajole Martin algorithm, Distance Sampling and Random Projections, Bloom filters, Mode, Variance, standard deviation, Correlation analysis and Analysis of Variance.					
Mapping of Course Outcomes for Unit II	Mapping of Course Outcomes CO2 for Unit II				
Unit III	BIG DATA PROCESSING	(06 Hrs)			
tasks, Job, Task trackers - Cluster ETL processing. Mapping of Course Outcomes for Unit III	tasks, Job, Task trackers - Cluster Setup – SSH & Hadoop Configuration, Introduction to NOSQL, Textua ETL processing. Mapping of Course Outcomes CO3				
Unit IV	BIG DATA ANALYTICS	(06 Hrs)			
Big Data Analytics- Architecture and Life Cycle , Types of analysis, Analytical approaches, Data Analytics with Mathematical manipulations, Data Ingestion from different sources (CSV, JSON, html, Excel, mongoDB, mysql, sqlite), Data cleaning, Handling missing values, data imputation, Data transformation, Data Standardization, handling categorical data with 2 and more categories, statistical and graphical analysis methods. Hive Data Analytics					
Mapping of Course Outcomes for Unit IV	CO4				
Unit V	BIG DATA VISUALIZATION	(06 Hrs)			
Introduction to Data visualization, Challenges to Big data visualization, Conventional data visualization tools, Techniques for visual data representations, Types of data visualization, Visualizing Big Data, Tool used in data visualization, Propriety Data Visualization tools, Open – source data visualization tools, Case Study: Analysis of a business problem of Zomato using visualization, Analytical techniques used in Big data visualization, Data Visualization using Tableau Introduction to: Candela, D3.js, Google Chart API					

Ma	pping of Course Outcomes	CO5]	
for	Unit V			
	Unit VI	BIG DATA TECHNOLOGIES APPLICATION AND IMPACT	(05 Hrs)	
Soc	ial media analytics , Text n	nining, Mobile analytics, Data analytics life	e cycle of case studies,	
Org	anizational impact, understar	ding decision theory, creating big data strateg	y, big data value creation	
driv	vers, Michael Porter's valuatio	n creation models, Big data user experience ra	amifications,	
Ide	ntifying big data use cases, Big	Data Analytics Challenges and Research direct	tions.

Savitribai Phule Pune University, Pune					
Third Year Information Technology (2019 Course)					
314453: Web Application Development					
Teaching Scheme: Credit Scheme: Examination Scheme:					
Theory (TH) : 3 hrs/week 03 Credit Mid_Semester : 30 Marks End_Semester : 70 Marks					
Prerequisite Courses:	1				
1. Programming languages C++, Java.					
Companion Course:					
 Advanced Database Management Design Thinking 	system				
Course Objectives: -					
1. To familiarize students with Web Pro	ogramming basic concepts				
2. To learn and understand Web script	ing languages.				
3. To explore the Front end& Backend	web programming skills.				
4. To understand and learn Mobile we	b development.				
5. To understand and learn Web applica	ition deployment.				
Course Outcomes: -					
On completion of the course, students will be able to-					
CO1: Develop Static and Dynamic website using technologies like HTML, CSS, Bootstrap.					
CO2: Demonstrate the use of web scrip	oting languages.				
CO3: Develop web application with F	Front End & Back End Technologie	S.			
CO4: Develop mobile website using JQ	uery Mobile.				
CO5: Deploy web application on cloud	using AWS.				
	COURSE CONTENTS				
Unit I	INTRODUCTION TO WEB TECHNOL	.OGIES (06 hrs)			
HTML: Getting started with HTML, Why HTML, Tags and Elements, Attributes, Properties, Headings list, Links, Tables, Images, HTML Form, Media (Audio, Video), Semantic HTML5 Elements.					
CSS: Why CSS Types of CSS How to use CSS Properties Classes Child-Class (Nested CSS) Colors Text					
Background, Border, Margin, Padding, Positioning (flex, grid, inline, block), Animation, Transition.					
BOOTSTRAP: Why Bootstrap, CSS over Bootstrap, How to Use Bootstrap, Bootstrap Grid System, Bootstrap Responsive, Bootstrap Classes, Bootstrap Components (i.e., Button, Table, List, etc.), Bootstrap as a Cross Platform.					
W3C: What is W3C , How W3C handles	s/Supports Web Technologies.				

Mapping of Course Outcomes	C01			
for Unit I				
Unit II	WEB SCRIPTING LANGUAGES	(06 hrs)		
avaScript: Introduction to Scripting languages, Introduction to JavaScript (JS), JS Variables and Constants, JS Variable Scopes, JS Data Types, JS Functions, JS Array, JS Object, JS Events,				
Advanced JavaScrint: ISON - ISON Create Key-Value Pair ISON Access ISON Array IS Arrow				
Functions, JS Callback Functions, JS P	romises, JS Async-Await Functions, JS Erro	r Handling.		
AJAX: Why AJAX, Call HTTP Methods Using AJAX, Data Sending, Data Receiving, AJAX Error Handling.				
JQUERY :Why JQuery, How to Use, I	DOM Manipulation with JQuery, Dynamic	Content Change with		
JQuery, UI Design Using JQuery.				
Mapping of Course Outcomes for Unit II	CO2			
Unit III	FRONT END TECHNOLOGIES	(06 hrs)		
Front-End Frameworks: What is we	b framework? Why Web Framework? W	eb Framework Types.		
TypeScript: Introduction to TypeScript AngularVersion 10+: Angular CLI, A Angular Modules, Angular Compone and Dependency Injections (DI), Ang ReactJS: Introduction to ReactJS, Re Styling, Routing, Redux- Architecture hook.	ot (TS), Variables and Constants, Modules i Ingular Architecture, Angular Project Stru- ents, Angular Data Binding, Directives an- gular Routers, Angular Forms. eact Components, Inter Components Com e, Hooks- Basic hooks, useState() hook, use	n TS. ucture, Angular Lifecycle, d Pipes, Angular Services nmunication, Component Effect() hook useContext(
	Vironmont Sotup, Nodo IS Events, Nodo IS	CUDIIIS)		
in Modulos Eilo System NDM Inst	all External Modules, Handling Data 1/0	in Nodo IS Crosto UTT		
Server, Create Socket Server, Microservices- PM2.				
ExpressJS: Introduction to ExpressJS, Configure Routes, Template Engines, ExpressJS as Middleware, Serving Static Files, REST HTTP Method APIs, Applying Basic HTTP Authentication, Implement Session Authentication.				
MongoDB: NoSQL and MongoDB Band Node.JS, Mongoose ODM for Middle	asics, MongoDB-Node.JS Communication	, CRUD Operations using		
Mapping	of Course Outcomes	СОЗ		
-----------------------	--	---	---------------------------	--
for Unit	V		1	
	Unit V	MOBILE WEB DEVELOPMENT	(06 hrs)	
Mobile-F	irst: What is Mobile-First? V	What is Mobile Web? Understanding Mobi	ile Devices and Desktop.	
JQuery N	Iobile: Introduction to the j	jQuery Mobile Framework, Set-up jQuery	Mobile, Pages, Icons,	
Transitio	ns, Layouts Widgets, Event	s, Forms, Themes, Formatting Lists, Head	er and Footer, CSS	
Classes, I	Data Attributes, Building a S	imple Mobile Webpage.		
Mapping	of Course Outcomes	CO4		
for Unit '	V			
	Unit VI	WEB APPLICATION DEPLOYMENT	(06 hrs)	
Cloud: A	WS Cloud, AWS Elastic Co	mpute, AWS Elastic Load Balancer and	its types, AWS VPC and	
Compon	ent of VPC, AWS storage, D	eploy Website or Web Application on AW	/S, Launch an Application	
with AW	S Elastic Beanstalk.

Feaching Scheme: Credit Scheme: Examination Scheme:				
Theory (TH) : 3 hrs/week	03 Credit	Mid_Seme End_Seme	ester: 30 Marks ester: 70 Marks	
Prerequisite Courses: 1. Discrete Mathematics, 2. Mac Programming Knowledge (Ja	hine Learning, 3. Data Structures a va, Python)	and Algorith	ms 4. Any	
Companion Course:				
L. Lab Practice - II				
 To understand Fundamental To explore Various knowledg To understand Fundamentals To explore of AI applications. 	concepts of Artificial Intelligence a e representations and reasoning s s of NLP and Game Theory.	nd different chemes.	search strategies.	
Course Outcomes:				
On completion of the course, stud	dents will be able to –			
CO1: Apply the fundamental conc	epts of Artificial Intelligence			
CO2: Choose appropriate search s	trategies for any AI problem			
CO3: Illustrate knowledge reason	ing and knowledge representation	n methods (f	or solving real world	
problems)				
CO4: Analyze the suitable techniq	ues of NLP to develop AI application	ons		
CO5: Correlate the appropriate m	ethods of Game Theory to design	AI applicatio	ons	
CO6: Understand the concept of c	leep learning and AI applications			
	COURSE CONTENTS			
Unit I	INTRODUCTION TO AI And SI	ARCH	(06 hrs)	
Artificial Intelligence: Introductic	n, Components of Artificial Intelli	gence, Chara	acteristics of Artificial	
ntelligence Systems, Intelligent A	gents, Types of Intelligent Agents			
Statistical Analysis: Correlation c	oefficient, Rank Correlation, Resid	lual Error, M	lean Square Error,	
RMSE, Probability Distributions, C	oncept of Discrete PD and Contin	uous PD		
Search Strategies: Problem space	es (states, goals and operators), problem	solving by search,	
Uninformed search (breadth-first	depth-first, depth first with iterati	ve deepenin	lg)	

Mapping of Course Outcomes for Unit I	CO1				
Unit II	PROBLEM SOLVING	(06 hrs)			
Heuristic Search Techniques: Ger Search; Problem Reduction.	Heuristic Search Techniques: Generate-and-Test; Hill Climbing; Properties of A* algorithm, Best-first Search; Problem Reduction.				
Constraint Satisfaction problem	: Interference in CSPs; Backtracking search for (CSPs; Local Search for			
CSPs; structure of CSP Problem.					
Beyond Classical Search: Local se	earch algorithms and optimization problem, loca	l search in continuous			
spaces, searching with nondeterr	ninistic action and partial observation, online set	arch agent and			
unknown environments.					
Mapping of Course Outcomes	CO2				
	KNOWLEDGE REPRESENTATION AND				
Unit III	REASONING	(06 hrs)			
Propositional knowledge, Boolean Knowledge Reasoning: Forward r Structured Knowledge Reasoning attached predicates, Conceptual E Reasoning Under Uncertainty: So theory; Bayes Theorem and Bayes Reasoning, Truth maintenance Sys Mapping of Course Outcomes for Unit III	easoning: Conflict resolution, backward reasoning g: Semantic Net - slots, inheritance, Frames- ex Dependency formalism, urce of Uncertainty, Probabilistic Reasoning and U ian networks, Certainty Factor, Dempster-Shafer th stems, Overview of Fuzzy Logic.	g: Use of backtracking, ceptions and defaults ncertainty; Probability heory, Non Monotonic			
Ior Unit IV		(06 hrs)			
Introduction: What is NLP, Steps in	n Natural Language Processing,	(00 110)			
Syntactic Analysis(Parsing): Grammars and Parsers, Augmented Transition Networks, Unification grammars					
Semantic Analysis: Semantic grammar, Case grammars, Conceptual parsing, Approximately					
Compositional Semantic Interpretation.					
Discourse and Pragmatic Processing: Using focus in Understanding, Modeling Beliefs, Using Goals and					
Plans for Understanding, Speech A	Acts, Conversational Postulates				
Text classification (Spell Checking)	, Probabilistic Language Models, Implementation a	aspects of Syntactic			
Analysis(Parsing)	Analysis(Parsing)				

Mapping of Course Outcomes	CO4			
for Unit IV				
Unit V	INTRODUCTION TO GAME THEORY	(06 hrs)		
Game Playing: Overview and Example	25.			
Domain: Overview, MiniMax, Alpha-	Beta Cut-off, Refinements, Iterative deepenir	ng, The Blocks World,		
Components of A Planning System,	Goal Stack Planning, Nonlinear Planning Usin	ng Constraint Posting,		
Hierarchical Planning, Reactive Syster	ns.			
Mapping of Course Outcomes	C05			
for Unit V				
Unit VI	RECENT AND FUTURE TRENDS IN AI	(06 hrs)		
Deep Learning: Introduction, Why	to go deep? Architecture of Deep Network,	Restricted Boltzmann		
Machines, Deep belief Network, Ter	isor Flow, Deep Learning libraries, Deep Leari	ning platform, The no,		
Caffe, Deep Learning Use Cases.				
Applications: Overview of Artificial	Intelligence Domains, Al-Robotics, Al-Neur	al Networks, AI-IOT,		
Computer Vision in Al				
Case Studies: Automatic Bird Identifi	cation using Deep Learning, Tumkur monitori	ng using Computer		
Vision, Text to Speech Conversion usir	ng APIs

SavitribaiPhule Pune University, Pune							
Third Year Information Technology (2019 Course)							
314	314454 (B): Elective-II (Cyber Security)						
Teaching Scheme: Credit Scheme: Examination Scheme:							
'heory (TH): 3 hrs/week O3 Credit Mid_ Semester: 30 Marks End_ Semester: 70 Marks							
Prerequisite Courses: if Any							
Companion Course:							
1. Computer Networks & Security							
Lourse Objectives:	of cyber security						
2. To learn different types of three	ats and cyber-crimes						
3. To understand the basics cybe	er forensics, network forensics, Er	nail forensics, web	forensics				
andcrypto currency forensics.							
4. To understand the basic digit	al forensics concepts and techniq	ues for conducting	the forensic				
examination on different digit	al devices.						
5. To analyze how particular soci	al engineering attacks take advanta	age of specific feature	res of the				
Internet and of human nature							
6. To learn the IT laws and cyber-	crime basics.						
Course Outcomes:							
On completion of the course, stud	ents will be able to-						
CO1: Develop basic understanding	of cyber security.						
CO2: Differentiate among differer	t types of cyber threats and cyber-	crimes.					
CO3: Illustrate cyber forensic tech	niques to identify the criminal activ	ities.					
CO4: Apply forensic analysis tools	to recover important evidence for i	dentifying compute	rcrime				
CO5: Distinguish and classify the forms of cybercriminal activity and the technological and social							
engineering' methods used to undertake such crimes							
CO6: Evaluate the effectiveness of cyber-security, cyber-laws and other countermeasures against							
cybercrime							
	COURSE CONTENTS						
Unit I	INTRODUCTION TO CYBER SE	CURITY	(06 hrs.)				
Introduction: Introduction to Cyber Security, Need, Importance and challenges in Cyber Security, Cyberspace, Cyber threats, Cyber-warfare, CIA Triad, Cyber Terrorism, Cyber Security of Critical Infrastructure, Cyber security - Organizational Implications.							

HOME

Mapping of Course Outcomes	CO1				
	Unit II CYBER CRIMES AND HACKING (06 hrs)				
Overview of Cyber-Attacks and	Vulnerabilities,				
Types of Threats – Malware,	spyware, Sniffing, Gaining Access, Escalating Privilege	s, Executing			
Applications, Hiding Files, Cover	ing Tracks, Worms, Trojans, Viruses, Backdoors.				
Types of Cyber Crime - cyber s	talking, forgery, software piracy, cyber terrorism, phishir	ng, computer			
vandalism, computer hacking, o	creating and distributing viruses over internet, spammin	ng, cross site			
scripting, online auction fraud,	cyber-squatting, logic bombs, web jacking, internet tim	e thefts, DoS			
attack, salami attack, data diddl	ing, email spoofing.				
Types of Hacker Hacking and Cra	acking, Hacking: Ethical issues, Ethical Hacking.				
Mapping of Course Outcomes for Unit II	CO2				
Unit III	CYBER FORENSICS	(06 hrs)			
Introduction to Cyber Forensic	s: What are cyber forensics, cyber forensics investigatio	n process, digital			
evidence, challenges in cyber fo	rensics;				
Web Attack Forensics: Intrusion	n forensics, database forensics, preventive forensics; Ant	ti- forensics			
practices, Anti-forensics detection	on techniques, Network forensics analysis tools; Malward	e Forensics:			
Malware types, Malware Analys	is, Tools for analysis;				
Email Forensics: e-mail Protoco	ols, e-mail crimes, email forensics; Bitcoin				
Forensics: crypto currency, crim	es related to bitcoin;				
Case Study: A detailed case stud	y on cyber forensics and its Investigation Reports.				
Mapping of Course Outcomes	CO3				
for Unit III					
Unit IV	DIGITAL FORENSICS	(06 hrs)			
Introduction to Digital Forensic	s, Cyber Forensics vs Digital Forensics, the role of digital	forensics and			
its environment, Forensic Soft	ware and Hardware, properties of digital evidence, red	covering and			
preserving digital evidence, A	dvanced forensic Tools, selecting and analyzing digit	al evidence,			
validating the evidence, Forensi	c Technology and Practices, Forensic Ballistics and Photog	graphy, Face,			
Iris and Fingerprint Recognition,	Audio Video Analysis				
Case Study: A detailed case stud	y on Digital Forensics				
Mapping of Course Outcomes	CO3, CO4				
for Unit IV					
Unit V	Unit V SOCIAL ENGINEERING (06 hrs)				
Introduction of social engineering	ig and cyber security, social engineering conceptual evolu	tion, defining			
social engineering-categories.	Phases, attack spiral model, Attack Vendors-social app	roach, socio-			
technical approach. Advanced social engineering attack. Phishing Attack. Insider Attack. Identity Theft					
Preventing Insider Threats, Social Engineering Targets and Defense Strategies.					
Case Study: Phishing and Identity	Case Study: Phishing and Identity Theft Online Scams				

Ma	apping of Course	CO5			
Ou	Dutcomes for Unit V				
	Unit VI	CYBER ETHICS AND LAWS	(06 hrs.)		
Int	roduction to Cyber Laws,	E-Commerce and E-Governance, Certifying Authority a	and Controller,		
Of	fences under IT Act, Compute	r Offences and its penalty under ISO 27001, IT Act 2000, P	Positive Aspects		
an	d weak areas of ITA 2000, I	Digital signatures and the Indian ITA act, ITA 2008, an	d International		
Sta	indards maintained for Cybe	r Security, Security Audit, Investigation by Investing			
Ag	ency, Intellectual Property Rig	ghts in Cyberspace.			
Ma	apping of Course	CO6

Savitr	ibaiPhule Pune University, Pur	e		
Third Year	Information Technology (2019 C	ourse)		
314454 (D): Ele	ctive –II (Software Modeling a	and Desi	gn)	
Teaching Scheme: Credit Scheme: Examination Scheme:				
Theory (TH): 3 hrs/week	02 Crodit	Mid_Se	mester: 30 Marks	
	US Credit	End_Sei	mester : 70 Marks	
Prerequisite Courses:				
1. Basic Knowledge of Object-oriented	Programming			
2. Software Engineering				
 Database Management System 				
Course Objectives:				
1. To understand and use of UML to an	rive at a design solution for real wo	orld proble	ems.	
2. To understand basics of object-orier	ited Modeling.			
3. To learn Design concepts to Model for	or real world problems using objec	t modelin	g.	
4. To explore Interaction and behavior	modeling.			
5. To understand Software design prine	ciples and patterns.			
6. To explore the architectural design a	guidelines in various type of application	ation deve	elopment.	
Course Outcomes:				
On completion of the course, students	will be able to-			
CO1: Understand basics of object orient	ed methodologies and Unified Mo	deling Lan	guage (UML).	
CO2: Apply analysis process, use case m	odeling, domain/class modeling			
CO3: Design and apply interaction and l	behavior modeling on a given syste	em.		
CO4: Comprehend OO design process a	ind business. access and view laver	class desi	ign.	
CO5: Recognize the software design pri	nciples and patterns to be applied	on system	0 N.	
CO6: Illustrate architectural design princ	iples and guidelines in the various	type of ap	plicationdevelopment.	
	COURSE CONTENTS			
Unit I	INTRODUCTION TO OOM AND	UML	(06 hrs)	
Introduction to Object Oriented Metho	dology- Study of various design me	ethodolog	ies like Object Oriented	
Design by Booch, Object Modelling Tec	hniques by Rumbaugh, Object-Ori	ented An	alysis by Codd Yourdon	
and Object-Oriented Software Engineer	ing by Ivar Jacobson			
Unified Approach – Unification of Bo	och, Rumbaugh and Jacobson m	ethodolog	gies, Object - Oriented	
Analysis, Object Oriented Design, Iterat	ive Development & Continuous Te	sting, Mo	delling based on UML ,	
Layered Approach				
Unified Modeling Language – Introdu	uction to Modeling and UML2.0,	MDA, U	ML2.0 Structure, UML	
Building Blocks, UML common Mechar	nisms, Introduction to all UML2.0	Diagram	notational	
Techniques, 4+1View				

Mapping of Course	CO1	
Outcomes for Unit I		
Unit II	OBJECT ORIENTED ANALYSIS	(06 hrs)
Object Oriented Analysis Process:	Use Case Modeling: Actor Identification, Ac	ctor Classification, Acto
Generalization, Use Case Identificatio	n, Uses/Include/Extend Association, Writing a	formal use case, Forwar
Engineering (Use case realization)		
Class Modeling: Approach for identif	fying class, Approaches for identifying classes	, Class pattern
approach, Class Responsibilities, Colla	aboration Approach, Naming Classes, Class ass	ociations Generalization
specialization relationship, Aggregation	on and Composition Relationships	
Mapping of Course Outcomes for Unit II	CO2	
Unit III	INTERACTION AND BEHAVIOR MODELING	(06 hrs)
Activity Diagram: Activity and Action	s, Activity Edge, Decision and Merge Points, Fc	ork-Join, Control
Flow, Constraints on Action, Swim La	nes.	
Sequence Diagram: Context, Objects	and Roles, Links, Object Life Line, Message or	r stimulus,
Activation/Focus of Control, delete ol	bject, Modelling Interactions.	
Collaboration Diagram: Objects and	Links, Messages and stimuli, Active Objects, Co	ommunication
Diagram, Iteration Expression, Paralle	l Execution, Guard Expression, Timing Diagram	
State Diagram: State Machine, Trigge nestedstate, Composite States, Subm	ers and Ports, Transitions and conditions, Initia achine States.	l and Final State,
Mapping of Course Outcomes	СОЗ	
for Unit III		
Unit IV	OBJECT ORIENTED DESIGN PROCESS	(hrs)
Object Oriented Design Process: De Designing Business Classes: The Pro Method Design Using UML Activity Di Designing Access Layer: Object Relati — Inherited Classes Mapping, Design layer class relationships, eliminate red Designing View Layer: View Layer Cla Macro-Level Design Process – identify Test Usability and User satisfaction: (esigning Business Layer: Object Oriented Consocess, Designing Well Defined Class Visibility agram, Packaging and Managing Classes. ional Systems, Object Relation Mapping, Table ning the Access Layer Classes: create mirror cla dundant classes, create method classes. asses Design, Identifying View Classes by Analy view layer objects, and build prototype for vie Component and Deployment Design using Com	straints Language (OCL) v, Attribute Refinement Class Mapping, Table asses, identify access zing Use Cases, w layer Interface. ponent and

314455: Internship			
Teaching Scheme:	Credit Scheme:	Examination Scheme:	
Theory (TH): 4 hrs/week	04 Credit	Team work: 100 Marks	
Prerequisite Courses: if Any			
Course Objectives:			
 To encourage and provide experience through internships 	opportunities for stu	idents to get professional/personal	
 To learn and apply the technic life/industrial situations. 	cal knowledge gained tro	om academics /classroom learning in real	
 To get familiar with various too applications. 	ls and technologies used	in industries and their	
 To enable students to develop the development of employer-v 	professional skills and e alued skills like teamwor	expand their professional network with k, communication.	
• To apply the experience gained completion project.	from industrial internshi	p to the academic course	
• To nurture professional and soc	ietal ethics in students		
 Understand the social, econom environment of industrial organ 	ic and administrative con izations	nsiderations that influence the working	
Course Outcomes:			
On completion of the internship, le	arner will be able to –		
CO1: Develop professional compete	ence through industry into	ernship.	
CO2: Apply academic knowledge if	a personal and profession and profession of the second structure students to the second structure st	future employees	
CO4: Apply professional and societ	al ethics in their day-to-d	av life.	
CO5: Become a responsible profess	ional having social, econo	omic and administrative considerations.	
CO6: Make own career goals and po	ersonal aspirations.		
	Guideline	5:	
Internships are educational and c	areer development oppo	ortunities, providing practical experience in	
field or discipline. Internships are	far more important as t	ne employers are looking for employees whe	
are properly skilled and having aw	areness about industry e	nvironment, practices and culture. Internship	
is structured, short- term, superv	ised training often focu	sed around particular tasks or projects with	
defined time scales.	shaical ctudants to the	industrial anvironment which cannot h	
simulated/experienced in the class	room and hence creating	competent professionals in the industry and	
to understand the social. econo	mic and administrative	considerations that influence the workin	
environment of industrial organiza	itions.		
Engineering internships are inter knowledge from academics to th proposed to give academic credit	nded to provide student the realities of the field for the internship under	ts with an opportunity to apply theoretica work/training. The following guidelines are gone as a part of the Third Year Engineering	

Curriculum for Third Year of Information Technology (2019 Course), Savitribai Phule Pune University

Duration:

Internship to be completed after semester 5 and before commencement of semester 6 of at least 4 to 6 weeks; and it is to be assessed and evaluated in semester 6.

Internship work Identification:

Student may choose to undergo Internship at Industry/Govt./NGO/MSME/Rural Internship/ Innovation/IPR/Entrepreneurship. Student may choose either to work on innovation or entrepreneurial activities resulting in start-up or undergo internship with industry/NGO's/Government organizations/Micro/Small/ Medium enterprises to makethemselves ready for the industry.

Contacting various companies for Internship and Internship work identification process should be initiated in the Vth semester in coordination with training and placement cell/ industry institute cell/ internship cell. This will help students to start their internship work on time. Also, it will allow students to work in vacation period after their Vth semester examination.

Student can take internship work in the form of Online/onsite work from any of the following but not limited to:

- Working for consultancy/ research project,
- Participation at Events (Technical / Business)/in innovation related completions like Hackathon,
- Contribution in Incubation/ Innovation/ Entrepreneurship Cell/ Institutional Innovation Council/ startups cells of institute /
- Learning at Departmental Lab/Tinkering Lab/ Institutional workshop,
- Development of new product/ Business Plan/ registration of start-up,
- Participation in IPR workshop/Leadership Talks/ Idea/ Design/ Innovation/ Business Completion/ Technical Expos,
- Industry / Government Organization Internship,
- Internship through Internshala,
- In-house product development, intercollegiate, inter department research internship under research lab/group, micro/small/medium enterprise/onle ineinternship,
- Research internship under professors, IISC, IIT's, Research organizations,
- NGOs or Social Internships, rural internship,
- Participate in open source development.

Internship Diary/Internship Workbook:

Students must maintain Internship Diary/ Internship Workbook. The main purpose of maintaining diary/workbook is to cultivate the habit of documenting. The students should record in the daily training diary the day-to-day account of the observations, impressions, information gathered and suggestions given, if any. The training diary/workbook should be signed after every day by the supervisor/ in charge of the section where the student has been working.

Internship Diary/workbook and Internship Report should be submitted by the students along with attendance record and an evaluation sheet duly signed and stamped by the industry to the Institute immediately after the completion of the training. Internship Diary/workbook may be evaluated on the basis of the following criteria:

- Proper and timely documented entries
- Adequacy & quality of information recorded
- Data recorded
- Thought process and recording techniques used
- Organization of the information

Internship Work Evaluation:

Every student is required to prepare a maintain documentary proofs of the activities done by him as internship diary or as workbook. The evaluation of these activities will be done by Programme Head/Cell In-charge/ Project Head/ faculty mentor /faculty or Industry Supervisor based on- Overall compilation of internship activities, sub-activities, the level of achievement expected, evidence needed to assign the points and the duration for certain activities.

Assessment and Evaluation is to be done in consultation with internship supervisor (Internal and External – a supervisor from place of internship.

Recommended evaluation parameters-Post Internship Internal Evaluation -50 Marks +Internship Diary/Workbook and Internship Report - 50 Marks

Evaluation through Seminar Presentation/Viva-Voce at the Institute-

The student will give a seminar based on his training report, before an expert committee constituted by the concerned department as per norms of the institute. The evaluation will be based on the following criteria:

- Depth of knowledge and skills Communication & Presentation Skills
- Team Work
- Creativity
- Planning & Organizational skills
- Adaptability
- Analytical Skills
- Attitude & Behavior at work

- Societal Understanding
- Ethics
- Regularity and punctuality
- Attendance record
- Log book
- Student's Feedback from External Internship Supervisor

After completion of Internship, the student should prepare a comprehensive report to indicate what he/she has observed and learnt in the training period. The student may contactIndustrial Supervisor/ Faculty Mentor/Faculty/TPO for assigning special topics and problems and should prepare the final report on the student's presence physically, if the student is found absent without prior intimation to the department/institute/concern authority/T & P Cell, entire training can be cancelled.

The report shall be presented covering following recommended fields but limited to,

- Title/Cover Page
- Internship completion certificate
- Internship Place Details- Company background-organization and activities/Scope and object of the study / personal observations
- Index/Table of Contents
- Introduction

Title/Problem statement/objectives Motivation/Scope and

rationale of the study Methodological details

Results / Analysis / inferences and conclusion

Suggestions / Recommendations for improvement to industry, if any Attendance Record

Acknowledgement

List of reference (Library books, magazines and other sources)

Feedback from internship supervisor(External and Internal)

Post internship, faculty/faculty coordinator should collect feedback about student with following recommended parameters-

Technical knowledge, Discipline, Punctuality, Commitment, Willingness to do the work, Communication skill, individual work, Team work, Leadership.

Savitribai Phule Pune University, Pune Third Year Information Technology (2019 Course) 314456: Computer Network Security Lab		
Teaching Scheme: Practical (PR) : 4 Hrs/week	Credit Scheme: 02 Credit	Examination Scheme: OR: 50 Marks
Prerequisites: 1. Fundamentals of Computer Network	works.	
 To design and implement small To learn various client/server e To understand network layer ro To understand the network sec 	size network and to understand nvironments to use applicatio puting protocols and its imple urity by using public key cryp	and various networking commands. on layer protocols. ementations. tography algorithms.
On completion of the course, stude CO1: Design and configure small s	ents will be able to– ize network and associated n	etworking commands.
CO2: Understand various client/set CO3: Use basic cryptographic tech CO4: Apply methods for authentica	rver environments to use app niques in software and system ation, access control, intrusion	lication layer protocols. m design. n detection.

Guidelines for Laboratory Conduction

As a conscious effort and little contribution towards Green IT and environment awareness, attaching printed papers of the program in journal may be avoided. There must be hand-written write-ups for every assignment in the journal. The DVD/CD containing student's programs should be attached to the journal by every student and same to be maintained by department/lab In-charge is highly encouraged.For reference one or two journals may be maintained with program prints at Laboratory.

List of Laboratory Assignments

Group A: Computer Network

- 1. Using a Network Simulator (e.g. packet tracer) Configure Router for...
 - a) Configure a router using router commands and Configure Routing Information Protocol(RIP).
 - **b)** Configure Access Control lists Standard & Extended.
 - c) Network Address Translation: Static, Dynamic & PAT (Port Address Translation)

2. Using a Network Simulator (e.g. packet tracer) Configure Routing Protocols,

- a) Configure EIGRP Explore Neighbor-ship Requirements and Conditions, its K Values Metrics Assignment and Calculation.
- **b)** OSPF Explore Neighbor-ship Condition and Requirement, Neighbor-ship states, OSPF MetricCost Calculation.
- c) WLAN with static IP addressing and DHCP with MAC security and filters.

3. Socket Programming in C/C++ on Linux.

- a) TCP Client, TCP Server
- b) UDP Client, UDP Server
- **4.** Introduction to server administration (server administration commands and their applications) and configuration of below Server: (Study/Demonstration Only)
 - a) FTP b) Web Server

Group B: Network Security

- **1.** Implement a client and a server on different computers using python. Perform the communication between these two entities by using RSA cryptosystem.
- **2.** Implement a client and a server on different computers using python. Perform the authentication of sender between these two entities by using RSA digital signature cryptosystem.
- **3.** Implement a client and a server on different computers using python. Perform the encryption of message of sender between these two entities by using DES Algorithm and use Diffie Hellman method for exchange of keys.
- **4.** Use the snort intrusion detection package to analyze traffic and create a signature to identify problem traffic.

Savitrik	oai Phule Pune University, Pu	ne
Third Year Ir	formation Technology (2019 (Course)
	314457: DS & BDA Lab	
Teaching Scheme:	Credit Scheme:	Examination Scheme:
Practical (PR) : 2 hrs/week O1 Credit PR : 25 Marks		
	orcreat	TW: 25 Marks
Prerequisites:		
1. Discrete mathematics		
2. Database Management Systems, D	Data warehousing, Data mining	
3. Programming in Python		
Course Objectives:		
1. To understand Big data primitives	and fundamentals.	
2. To understand the different Big da	ta processing techniques.	
3. To understand and apply the Analy	ytical concept of Big data using Pyth	on.
4. To understand different data visua	alization techniques for Big Data.	
5. To understand the application and	l impact of Big Data.	
6. To understand emerging trends in	Big data analytics.	
Course Outcomes:		
On completion of the course, students	s will be able to-	
CO1: Apply Big data primitives and fun	damentals for application developn	nent.
CO2: Explore different Big data proces	sing techniques with use cases.	
CO3: Apply the Analytical concept of B	Big data using Python.	
CO4: Visualize the Big Data using Table	eau.	
CO5: Design algorithms and technique	es for Big data analytics.	
CO6: Design and develop Big data ana	lytic application for emerging trends	5.
Gu	idelines for Instructor's Manual	
The faculty member should prepare	the laboratory manual for all the	experiments and it should be
made available to students and labora	tory instructor/Assistant.	
Gui	delines for Student's Lab Journal	
Student should submit term work in assignments.	the form of handwritten journal ba	sed on specified list of
Practical Examination will be based on	the term work.	
Candidate is expected to know the the	eory involved in the experiment.	
The practical examination should be all respects.	conducted if and only if the journal	of the candidate iscomplete in

Guidelines for Lab /TW Assessment

Examiners will assess the term work based on performance of students considering the parameters such as timely conduction of practical assignment, methodology adopted for implementation of practical assignment, timely submission of assignment in the form of handwritten write-up along with results of implemented assignment, attendance etc.

Examiners will judge the understanding of the practical performed in the examination by asking some questions related to theory & implementation of experiments he/she has carried out.

Appropriate knowledge of usage of software and hardware related to respective laboratory should be checked by the concerned faculty member.

Guidelines for Laboratory Conduction

- **1.** All assignments of Part-A, Part-B and first assignment of Part-C should be covered in Laboratory and part of SPPU Practical examination.
- **2.** Part-C second assignments are a group activity to be carried out in group of 4-5 students and students should submit the document related to it as part of journal.

Guidelines for Practical Examination

- **1.** During practical assessment, maximum weightage should be given to satisfactory implementation of the problem statement.
- 2. Student 's understanding of the fundamentals, effective and efficient implementation can be evaluated by asking relevant questions based implementation of experiments he/she has carried out.

List of Laboratory Assignments

Group A: Assignments based on the Hadoop

- 1. Single node/Multiple node Hadoop Installation.
- 2. Design a distributed application using MapReduce(Using Java) which processes a log file of a system. List out the users who have logged for maximum period on the system. Use simple log file from the Internet and process it using a pseudo distribution mode on Hadoop platform.
- 3. Write an application using HiveQL for flight information system which will include
 - **a.** Creating, Dropping, and altering Database tables.
 - **b.** Creating an external Hive table.
 - c. Load table with data, insert new values and field in the table, Join tables with Hive
 - d. Create index on Flight Information Table
 - e. Find the average departure delay per day in 2008.

Group B: Assignments based on Data Analytics using Python				
1.	Perform the following operations using Python on the Facebook metrics data sets			
	a. Create data subsets			
	b. Merge Data			
	c. Soft Data			
	a. Transposing Data			
2	Perform the following operations using Python on the Air quality and Heart Diseases data sets			
2.	a Data cleaning			
	b. Data integration			
	c. Data transformation			
	d. Error correcting			
	e. Data model building			
3.	Integrate Python and Hadoop and perform the following operations on forest fire dataset			
	a. Data analysis using the Map Reduce in PyHadoop			
	b. Data mining in Hive			
4.	Visualize the data using Python libraries matplotlib, seaborn by plotting the graphs for assignment			
_	no. 2 and 3 (Group B)			
5.	Perform the following data visualization operations using Tableau on Adult and Iris datasets.			
	a. 1D (Linear) Data visualization			
	b. 2D (Planar) Data Visualization			
	d Temporal Data Visualization			
	Multidimensional Data Visualization			
	f. Tree/Hierarchical Data visualization			
	g. Network Data visualization			
	Group C: Model Implementation			
1.	Create a review scrapper for any ecommerce website to fetch real time comments, reviews,			
	ratings, comment tags, customer name using Python.			
2.	Develop a mini project in a group using different predictive models techniques to solve any real life			
	problem. (Refer link dataset- https://www.kaggle.com/tanmovie/us-graduate-schools- admission-			
	parameters)

Savitri	bai Phule Pune University	, Pune
Third Year I	nformation Technology (20	19 Course)
314458: Laboratory	/ Practice-II (Web Applicat	ion Development)
Teaching Scheme:	Credit Scheme:	Examination Scheme:
Practical (PR): 4 hrs/week		PR: 25 Marks
	02 Credit	TW : 50 Marks
Prerequisites: Programming languag	es C++, Java	
Course Objectives:		
1. To understand basic concepts of w	eb programming and scripting la	anguages.
2. To learn Version Control Environm	ent.	
3. To learn front end technologies an	d back end technologies.	
4. To understand mobile web develop	oment.	

5. To comprehend web application deployment.

Course Outcomes:

On completion of the course, students will be able to-

CO1: Develop Static and Dynamic responsive website using technologies HTML, CSS, Bootstrapand AJAX.

CO2: Create Version Control Environment.

CO3: Develop an application using front end and backend technologies.

CO4: Develop mobile website using JQuery Mobile.

CO5: Deploy web application on cloud using AWS.

Guidelines for Instructor's Manual

Lab Assignments: Following is a list of suggested laboratory assignments for reference. Laboratory Instructors may design a suitable set of assignments for their respective courses at their level. Beyond curriculum assignments, the mini-project is also included as a part of laboratory work. The Inclusion of few optional assignments that are intricate and/or beyond the scope of curriculum will surely be the value addition for the students and it will satisfy the intellectuals within the group of the learners and will add to the perspective of the learners. For each laboratory assignment, it is essential for students to draw/write/generate flowchart, algorithm, test cases, mathematical model, Test data set and comparative/complexity analysis (as applicable).

Guidelines for Student's Lab Journal

Program codes with sample output of all performed assignments are to be submitted as softcopy. Use of DVD or similar media containing students programs maintained by Laboratory In-charge is highly encouraged. For reference one or two journals may be maintained with program prints in the Laboratory. As a conscious effort and little contribution towards Green IT and environment awareness, attaching printed papers as part of write-ups and program listing to journals may be avoided. Submission of journal/ term work in the form of softcopy is desirable and appreciated.

Guidelines for Lab /TW Assessment

Term work is continuous assessment that evaluates a student's progress throughout the semester. Term work assessment criteria specify the standards that must be met and the evidence that will be gathered to demonstrate the achievement of course outcomes. Categorical assessment criteria for the term work should establish unambiguous standards of achievement for each course outcome. They should describe what the learner is expected to perform in the laboratories or on the fields to show that the course outcomes have been achieved. It is recommended to conduct an internal monthly practical examination as part of continuous assessment.

Guidelines for Laboratory Conduction

Following is a list of suggested laboratory assignments for reference. Laboratory Instructors may design a suitable set of assignments for respective courses at their level. Beyond curriculum assignments and mini-project may be included as a part of laboratory work. The instructor may set multiple sets of assignments and distribute among batches of students. It is appreciated if the assignments are based on real world problems/applications. The Inclusion of few optional assignmentsthat are intricate and/or beyond the scope of curriculum will surely be the value addition for the students and it will satisfy the intellectuals within the group of the learners and will add to the perspective of the learners. For each laboratory assignment, it is essential for students to draw/write/generate flowchart, algorithm, test cases, mathematical model, Test data set and comparative/complexity analysis (as applicable). Batch size for practical and tutorials may be as per guidelines of authority.

Guidelines for Practical Examination

Students' work will be evaluated typically based on the criteria like attentiveness, proficiency in execution of the task, regularity, punctuality, use of referencing, accuracy of language, use of supporting evidence in drawing conclusions, quality of critical thinking and similar performance measuring criteria.

List of Laboratory Assignments Group A-(WAD)

Assignment 1

a. Create a responsive web page which shows the ecommerce/college/exam admin dashboard with sidebar and statistics in cards using HTML, CSS and Bootstrap.

b. Write a JavaScript Program to get the user registration data and push to array/local storage with AJAX POST method and data list in new page.

Assignment 2

- **a.** Create version control account on GitHub and using Git commands to create repository and push your code to GitHub.
- b. Create Docker Container Environment (NVIDEIA Docker or any other).
- c. Create an Angular application which will do following actions: Register User, Login User, Show User Data on Profile Component

Assignment 3

- a. Create a Node.JS Application which serves a static website.
- b. Create four API using Node.JS, ExpressJS and MongoDB for CURD Operations on assignment 2.C.

Assignment 4

- **a.** Create a simple Mobile Website using jQuery Mobile.
- b. Deploy/Host Your web application on AWS VPC or AWS Elastic Beanstalk. Mini Project

Develop a web application using full stack development technologies in any of the following domains:

- 1. Social Media
- **2.** ecommerce
- 3. Restaurant
- 4. Medical
- 5. Finance
- 6. Education
- 7. Any other

OME

Guidelines for Laboratory Conduction

Following is a list of suggested laboratory assignments for reference. Laboratory Instructors may design a suitable set of assignments for respective courses at their level. Beyond curriculum assignments and mini-project may be included as a part of laboratory work. The instructor may set multiple sets of assignments and distribute among batches of students. It is appreciated if the assignments are basedon real world problems/applications. The Inclusion of few optional assignments that are intricate and/or beyond the scope of curriculum will surely be the value addition for the students and it will satisfy the intellectuals within the group of the learners and will add to the perspective of the learners. For each laboratory assignment, it is essential for students to draw/write/generate flowchart, algorithm, test cases, mathematical model, Test data set and comparative/complexity analysis (as applicable). Batch size for practical and tutorials may be as per guidelines of authority.

Guidelines for Practical Examination

Students' work will be evaluated typically based on the criteria like attentiveness, proficiency in execution of the task, regularity, punctuality, use of referencing, accuracy of language, use of supporting evidence in drawing conclusions, quality of critical thinking and similar performance measuring criteria.

List of Laboratory Assignments Group A

- 1. Identify and Implement heuristic and search strategy for Travelling Salesperson Problem
- 2. Implement n-queens problem using Hill-climbing / simulated annealing / A* algorithm etc. Write a program for Water jug problem / Towers of Hanoi
- **3.** Write a program for sorting algorithms using appropriate knowledge representation and reasoning techniques.
- **4.** Write a program for the Information Retrieval System using appropriate NLP tools (such as NLTK, Open NLP, ...)
 - a. Text tokenization
 - **b.** Count word frequency
 - c. Remove stop words
 - d. POS tagging

5. Write a program for the Tic-Tac-Toe game.

Group B (Mini Project)

Develop a Web Based Application for any one of the following:

- **1.** Develop a Text Classification tool as a CRM task or Web Crawler application.
- 2. Develop a Speech to Text System with the help of POS tagging
- 3. E-commerce stores using Forward/backward chaining
- **4.** Sudoku puzzle
- 5. Detection and recognition of object such as Face, Fruit, Finger print etc. using Deep Learning

- 1. Natural Language Processing with Python by Steven Bird, Ewan Klein, Edward Loper
- 2. <u>https://www.deeplearningbook.org/contents/TOC.html</u>
- 3. https://www.nltk.org/
- 4. K. Boyer, L. Stark, H. Bunke, "Applications of AI, Machine Vision and Robotics, World Scientific PubCO, 1995

2. Practical Examination will be based on the CS theory and CS lab Assignments.			
3. Candidate is expected to know	3. Candidate is expected to know the theory involved in the experiment.		
4. The Practical examination should be conducted if the journal of the candidate is completed in all respects andcertified by concerned faculty and head of the department.			
5. All the assignment mentioned	in the syllabus must be conducted.		

Guidelines for Lab /TW Assessment

- 1. Examiners will assess the term work based on performance of students considering the parameters such as timely conduction of practical assignment, methodology adopted for implementation of practical assignment, timely submission of assignment in the form of handwritten write-up along with results of implemented assignment, attendance etc.
- **2.** Examiners will judge the understanding of the practical performed in the examination by asking some questions related to theory & implementation of experiments he/she has carried out.
- **3.** Appropriate knowledge of usage of software and hardware such as tags, coding standards, design flow to be implemented etc. should be checked by the concerned faculty member(s).

Guidelines for Laboratory Conduction

The instructor is expected to frame the assignments by understanding the prerequisites, technological aspects, utility and recent trends related to the topic. The instructor may set multiple sets of assignments and distribute among batches of students. It is appreciated if the assignments are based on real world problems/applications. All the assignments should be conducted on open-source software.

Guidelines for Practical Examination

Both internal and external examiners should jointly conduct practical examination. During assessment, the examiners should give the maximum weight age to the satisfactory answer of the problem statement In question. The supplementary and relevant questions may be asked at the time of evaluation to judge the student's understanding of the fundamentals, effective and efficient implementation.

List of Laboratory Assignments

- 1. Write a program to sniff packet sent over the local network and analyze it.
- 2. Create an attack using python script and implement attack and analyze the effect of attack.
 - a) DDOS Attack
 - **b)** IP spoofing
 - c) DNS Attack
- **3.** Write a program in python script for Spam Mail Detection (Spam Filtering Implementation).
- 4. IDS Use Distributed IDS Attack Information to gathers log files from users around the network and prepares reports to determine if their networks have encountered intrusion attempts.

Guidelines for Laboratory Conduction

- **1.** The instructor is expected to frame the assignments by understanding the prerequisites, technologicalaspects, utility and recent trends related to the topic.
- **2.** The instructor may set multiple sets of assignments and distribute among batches of students. Students should work in group of 3-4 students. Common problem statement (minimum 3-4 major functionalities it should cover) should be considered to execute all assignment.
- **3.** It is appreciated if the assignments are based on real world problems/applications.
- **4.** Any open-source UML designing tool like StarUML, Visual Paradigm, Umbrello, AgroUML, can be used todraw UML diagram. Languages and databases : JAVA, MySQL, MongoDB, C#.

Guidelines for Practical Examination

Both internal and external examiners should jointly set problem statements for practical/ Oral examination. During practical / Oral assessment, the expert evaluator should give the maximum weightage to the satisfactory implementation of the problem statement. The supplementary and relevant questions may be asked at the time of evaluation to judge the student's understanding of the fundamentals, effective and efficient implementation. The evaluation should be done by both external and internal examiners.

List of Laboratory Assignments

Assignment 1: Write Problem Statement and draw Use Case diagrams for Mini Project (4Hrs)

Identify Project of enough complexity, which has at least 4-5 major functionalities.

Identify stakeholders, actors and write detail problem statement for your system.

Identify Major Use Cases, Identify actors. Write formal Use Case specification for all major Use Cases.

Assignment 2: Prepare Dynamic Model for the system (4 Hrs)

Identify Activity states and Action states.

Draw Activity diagram with Swim lanes and fork-joins using UML 2.0 Notations for major Use CasesDraw Sequence Diagram Using UML 2.0 notations for major Use Cases.

Assignment 3: Prepare Static Model for the System (6 Hrs)

Draw class diagram using UML 2.0 notations. Prepare Data Dictionary for the databases. Draw Deployment diagram UML 2.0 notations.

Assignment 4: Outputs and Code demonstration (10 Hrs)

Write the code for the Mini Project.

Execute the code and record the output screens
